Medical Data Mining And Knowledge Discovery:

Medical Data Mining and Knowledge Discovery Krzysztof J. Cios, 2001-01-12 Modern medicine generates almost daily huge amounts of heterogeneous data For example medical data may contain SPECT images signals like ECG clinical information like temperature cholesterol levels etc as well as the physician's interpretation Those who deal with such data understand that there is a widening gap between data collection and data comprehension Computerized techniques are needed to help humans address this problem This volume is devoted to the relatively young and growing field of medical data mining and knowledge discovery As more and more medical procedures employ imaging as a preferred diagnostic tool there is a need to develop methods for efficient mining in databases of images Other significant features are security and confidentiality concerns Moreover the physician's interpretation of images signals or other technical data is written in unstructured English which is very difficult to mine This book addresses all these specific features **Interactive**

Knowledge Discovery and Data Mining in Biomedical Informatics Andreas Holzinger, Igor Jurisica, 2014-06-17 One of the grand challenges in our digital world are the large complex and often weakly structured data sets and massive amounts of unstructured information This big data challenge is most evident in biomedical informatics the trend towards precision medicine has resulted in an explosion in the amount of generated biomedical data sets Despite the fact that human experts are very good at pattern recognition in dimensions of 3 most of the data is high dimensional which makes manual analysis often impossible and neither the medical doctor nor the biomedical researcher can memorize all these facts A synergistic combination of methodologies and approaches of two fields offer ideal conditions towards unraveling these problems Human Computer Interaction HCI and Knowledge Discovery Data Mining KDD with the goal of supporting human capabilities with machine learning pp This state of the art survey is an output of the HCI KDD expert network and features 19 carefully selected and reviewed papers related to seven hot and promising research areas Area 1 Data Integration Data Pre processing and Data Mapping Area 2 Data Mining Algorithms Area 3 Graph based Data Mining Area 4 Entropy Based Data Mining Area 5 Topological Data Mining Area 6 Data Visualization and Area 7 Privacy Data Protection Safety and Security Healthcare
