Membrane Nanodomains John R Silvius:

Membrane Nanodomains John R. Silvius, 2013 Many membranes in eukaryotic cells are inhomogeneous structures in which various membrane components are nonrandomly distributed forming diverse types of domains Some membrane domains have long been well known because they are sufficiently large long lived and morphologically well defined to be characterized using classical microscopic and biochemical approaches However new technologies have revealed the presence in membranes of smaller often highly dynamic nanodomains that also play key roles in membrane function Our current understanding of the diversity the properties and the functions of nanodomains is still very limited and in some cases controversial Nonetheless it is clear that many important aspects of membrane biology arise from features of membrane organization that play out on spatial and temporal scales that are only now becoming experimentally accessible in living systems In this book we will discuss properties and interactions of membrane molecules that lead to nanodomain formation new and emerging technologies by which nanodomains can be studied and experimental examples that illustrate both highlights and current limitations of our present knowledge of the properties of membrane nanodomains in various cell types

The Molecular Biology of Neurofibromatosis Type 1 Meena Upadhyaya, 2014-02-01 Neurofibromatosis type 1 NF1 is a common autosomal dominantly inherited tumour predisposition syndrome affecting 1 3 000 4 000 individuals worldwide This inherited disorder results from the mutational inactivation of the NF1 gene on human chromosome 17 The NF1 gene contains 61 exons that give rise to 12kb mRNA encoding neurofibromin The 327kDa 2 818 amino acid neurofibromin protein is expressed in most tissues and has a number of alternative isoforms Neurofibromin is a tumour suppressor protein and down regulates cellular Ras Increased active Ras GTP levels also stimulate the important PI3K AKT mTOR signalling pathway that protects cells from apoptosis The major clinical features of NF1 include multiple café au lait macules skinfold freckles iris Lisch nodules and neurofibromas The diagnostic criteria for clinical diagnosis have been well established However there are a small number of cases in which the diagnosis is not certain The germline mutation rate for the NF1 gene is 10 fold higher than that observed for most other inherited diseases Using a combination of different techniques almost 95% of germline mutations can be detected To date only two firm genotype phenotype correlations have been reported NF1 phenotype exhibits large variations within a family evidence for modifying loci regulating the expression of an NF1 gene is beginning to emerge We also are gaining knowledge on the molecular mechanisms associated with the development of different types of tumours It is encouraging that the results of recent laboratory and clinical research are finally being translated into clinical trials With the availability of high throughput technologies sophisticated animal models and multi centre clinical trials the future for NF1 sufferers is looking optimistic This book aims to provide an overview of the genetic and clinical aspects of NF1 and its role in both NF1 associated and sporadic tumour development It emphasizes the recent developments in this field and some of the promising ongoing clinical trials

Characterization of Biological Membranes Mu-Ping Nieh, Frederick A.

Heberle, John Katsaras, 2019-07-22 The study of membranes has become of high importance in the fields of biology pharmaceutical chemistry and medicine since much of what happens in a cell or in a virus involves biological membranes The current book is an excellent introduction to the area which explains how modern analytical methods can be applied to study biological membranes and membrane proteins and the bioprocesses they are involved to Cell Membrane Nanodomains

Alessandra Cambi, Diane S. Lidke, 2014-10-27 Cell Membrane Nanodomains From Biochemistry to Nanoscopy describes recent advances in our understanding of membrane organization with a particular focus on the cutting edge imaging techniques that are making these new discoveries possible With contributions from pioneers in the field the book explores areas where the application of these novel **The Role of Membrane Nanodomains in Permeation** Sonja Kirsch, 2019
