*The Web and Faith* Ayse Kok, 2022-09-01

Computing technology is an indispensable feature of modern life. Our rapid paced world seems more and more remote from the world narrated in sacred scriptures. However, despite its pervasiveness, there remains a dearth of theological reflection about computer technology and what it means to live as a faithful individual in a digitally saturated society. *The Web and Faith* provides a brief theology of technology rooted in the Islamic tradition and oriented around the grand themes of creation, redemption, and new creation. The book combines a concise, accessible style with penetrating cultural and theological analysis. Building on the work of Marshall McLuhan and Neil Postman and drawing from a wide range of enlightened Islamic thinkers, the book situates computer technology within the big picture of the story of creation. Technology is not neutral, but neither is there an exclusively faith based form of technological production and use. Instead, this book guides us to see the digital world as part of a larger creation which is redeemable according to the law of faith. Responsibly used technology can become an integral part of religious wisdom world wide.

**The Double Black Box** Ashley S. Deeks, 2025. National security decisions pose a paradox: they are among the most consequential a government can make but are generally the least transparent to the democratic public. The black box nature of national security decision making, driven by extensive classification and characterized by difficulty overseeing executive actions, has expanded in the United States as executive power continues to grow. The rise of artificial intelligence (AI) systems to enhance national security decision making or even to make autonomous decisions deepens this challenge because it is difficult to understand how AI algorithms, often described as black boxes, reach their conclusions. The widespread use of AI inside the national security ecosystem renders U.S. national security choices even more opaque to the public, congressional overseers, U.S. allies, and even the executive officials making the decisions. How can we be confident that the U.S. government's use of these AI systems comports with our values, including rationality, lawfulness, and accountability? *The Double Black Box: National Security, Artificial Intelligence, and the Struggle for Democratic Accountability* addresses these pressing challenges. Because China is committed to becoming the world leader in AI and faces fewer legal and values based constraints on its pursuit of military AI, democracies' commitment to using AI in lawful and ethical ways will be tested. This book defines and explores the double black box phenomenon and then identifies ways that policymakers, military and intelligence officials, and lawyers in democratic states such as the United States can reap the advantages of advanced technologies without surrendering their public law values.

**Artificial Intelligence and Law in the Communication Professions** Cayce Myers, 2025-06-06. This book analyzes the current attempts to regulate artificial intelligence (AI) and its impact on the communication field. Examining existing and proposed laws, policies, and regulations of AI in the U.S. and the European Union, this book analyzes how the technological development of AI will be governed in the next decade and how this will impact the communication industry. Chapters explore the influence of laws on key communication issues, including free speech, disinformation, intellectual property, privacy, and discrimination, as well as the AI industry's approach to self-regulation. It shows how communication professionals such as public relations practitioners, advertisers, and

journalists will be affected by generative AI content production and how communication will ultimately be shaped by the regulations and laws placed on AI Providing readers with a working knowledge of the contemporary legal issues surrounding AI and communication this book will be of interest to scholars and students in the fields of Media and Communication Law Public Relations Advertising and Journalism *Democratic Frontiers* Michael Filimowicz, 2022-02-09 *Democratic Frontiers* Algorithms and Society focuses on digital platforms effects in societies with respect to key areas such as subjectivity and self reflection data and measurement for the common good public health and accessible datasets activism in social media and the import export of AI technologies relative to regime type Digital technologies develop at a much faster pace relative to our systems of governance which are supposed to embody democratic principles that are comparatively timeless whether rooted in ancient Greek or Enlightenment ideas of freedom autonomy and citizenship Algorithms computing millions of calculations per second do not pause to reflect on their operations Developments in the accumulation of vast private datasets that are used to train automated machine learning algorithms pose new challenges for upholding these values Social media platforms while the key driver of today s information disorder also afford new opportunities for organized social activism The US and China presumably at opposite ends of an ideological spectrum are the main exporters of AI technology to both free and totalitarian societies These are some of the important topics covered by this volume that examines the democratic stakes for societies with the rapid expansion of these technologies Scholars and students from many backgrounds as well as policy makers journalists and the general reading public will find a multidisciplinary approach to issues of democratic values and governance encompassing research from Sociology Digital Humanities New Media Psychology Communication International Relations and Economics Chapter 3 of this book is available for free in PDF format as Open Access from the individual product page at [www.routledge.com](http://www.routledge.com) It has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4.0 license
