Introduction to Marketing Analytics Prof. Dr. R. Gopal, Prof. Dr. Gagandeep Kaur Nagra, Dr. Priya Vij, 2024-10-15 Introduction to Marketing Analytics delves into the foundational elements of marketing known as the 4Ps Product Price Place and Promotion and expands upon them to include additional key components crucial for services marketing such as People Process and Physical Evidence. These elements are vital for companies to develop coherent marketing strategies that not only attract new customers but also build long term loyalty among existing ones. The rise of digital technologies has significantly transformed how companies engage with consumers and conduct market research. Big data analytics now allows for personalized marketing efforts creating campaigns offering organizations the ability to better understand and respond to customer journeys. Moreover the book highlights the growing role of artificial intelligence AI and machine learning in modern marketing strategies. By integrating these advanced technologies businesses can better meet their customers evolving needs outpacing the competition. It covers various analysis techniques such as marketing mix modelling that help organizations understand the impact of different marketing activities on sales and other key performance indicators KPIs. Through real life examples and case studies this book highlights a practical guide for professionals looking to apply data driven marketing strategies to drive growth innovation and sustainable success in a constantly changing market landscape.

From Digital Twins to Digital Selves and Beyond Franz Barachini, Christian Stary, 2022-03-30 This open access book aims at deepening the understanding of the relation between cyber physical systems CPSs as socio technical systems and their digital representations with intertwined artificial intelligence AI. The authors describe why it is crucial for digital selves to be able to develop emotional behavior and why a humanity inspired AI is necessary so that humans and humanoids can coexist. The introductory chapter describes major milestones in computer science which form the basis for the implementation of digital twins and digital selves. The subsequent Part I then lays the foundation to develop a socio technical understanding of the nature of digital twins as representations and trans human development objects. Following the conceptual understanding of digital twins and how they could be engineered according to cognitive and organizational structures Part II forms the groundwork for understanding social behavior and its modeling. It discusses various perception based socio emotional approaches before sketching behavior relevant models and their simulation capabilities. In particular it is shown how emotions can substantially influence the collective behavior of artificial actors. Part III eventually presents a symbiosis showing under which preconditions digital selves might construct and produce digital twins as integrated design elements in trans human ecosystems. The chapters in this part are dedicated to opportunities and modes of co creating reflective socio trans human systems based on digital twin models exploring mutual

control and continuous development The final epilog is congenitally speculative in its nature by presenting thoughts on future developments of artificial life in computational substrates The book is written for researchers and professionals in areas like cyber physical systems robotics social simulation or systems engineering interested to take a speculative look into the future of digital twins and autonomous agents It also touches upon philosophical aspects of digital twins digital selves and
