Retail's Seismic Shift Michael Dart, Robin Lewis, 2017-10-31 In their previous book *The New Rules*

of Retail Dart and Lewis predicted nearly every defining characteristic of today's marketplace. Here they do the same for the next era in which retailers will have to be ready for anything. For one hundred years retail was designed for the car, buildings and malls to travel to. Now it is designed for the mobile smart device for consumers to travel with. In a world with an overabundance of material goods, consumer values and the drivers of retail success are being radically redefined. The smartphone has created a world of limitless expectation and logistical possibility. What will the retail experience look like in ten, twenty or even fifty years, and how should all companies be preparing? Industry experts Michael Dart and Robin Lewis identify the major trends in our economy that will shape the future of retail and determine who wins. Imagine a world where entertainment experience or values matter more than the product. We are approaching the time in which distribution begins and ends with the consumer. Mass markets give way to fragmented markets, and the necessity of entirely new business models is paramount. Amazon, Uber and AirBnB are just the beginning; new technologies will continue to grow and uproot existing business models. And now, with the emergence of the technology-empowered young consumer culture, retailers will be forced to transform their offerings.

Logistics Growth Ethan Evans, AI, 2025-02-28. *Logistics Growth* examines how supply chain management, warehousing strategies and transportation networks collaboratively power the global economy. It highlights that these elements are crucial arteries for the flow of products, capital and information globally, emphasizing their importance for navigating contemporary business complexities. Did you know that warehousing has evolved from simple storage to sophisticated hubs for value-added services? Or that innovations like autonomous vehicles are transforming transportation? The book progresses from a historical overview of logistics to exploring supply chain management principles like demand forecasting and supplier relationships. It dedicates sections to warehousing (covering layouts and automation) and transportation (examining various modes and route optimization). By integrating academic research, industry reports and case studies, *Logistics Growth* uniquely provides actionable insights for improving logistics operations and anticipating future trends.

Controllable Artificial Intelligence and the Future of Law Hugo Luz dos Santos, 2025-11-08. This book broaches the newly crafted concept of algorithmic dictatorship that draws on a plethora of human biases that creep into the algorithm and feeds into an automated decision that comes at the expense of citizens' lives, freedoms, health, property, fair lending and credit scoring. This book sheds a keen light on the slew of reasons in view of which artificial intelligence should be both interpretable and controllable, as opposed to merely explainable. The reason for that is straightforward: the skewed data baked into the bigoted algorithms' machine biases spawns harrowing effects with which criminal justice has been grappling for a long haul. Drawn out tallyingly and perhaps unsurprisingly, law enforcement evinces biases that run along both gender and race lines. No surprise springs from the fact that computer-generated algorithms that propel predictive policing are often flagged as tools whereby racial discrimination abounds. It should not therefore be pegged as flabbergasting that this sort of shady algorithmic governance is a byproduct of a grueling algorithmic dictatorship that is shaping up to

crumble the foundations of Rule of Law upon which stands modern societies This is one of the key takeaways of this book Disturbingly enough brain computer interfaces are poised to be converted into shady tools to collate gauge thoughts emotions sentiments and crime related information that would be otherwise inaccessible to the governments rogue nations or unscrupulous actors prying eyes Much to our dismay an eerily dystopian world is unfolding before our very eyes This is the gist of transhumanism a byproduct of convolutional neural networks that revolve around deep learning genetic algorithms that will overhaul the current legal landscape beyond recognition This book charts the path ahead as to draw set in stone boundaries to prevent jurisdictions from careening into the chaos of genetic plutocracy that should be wished away
