In an era marked by fast technological developments and growing environmental issues, urban development is at a crossroad. The combination of digital innovation and sustainable practices presents unprecedented prospects for reimagining urban living, resulting in resilient communities that are sustainable, dynamic and inclusive. Smart infrastructure and smart homes become more available, helping provide better accessibility, social interaction, building service and user comfort. Further research may increase quality of life and help cities advocate for more sustainable urban systems. *Fostering Resilience and Quality of Life Through Sustainable Urban Evolution* explores how digital transformation can promote sustainable urban evolution, increase resilience and improve the quality of life for all inhabitants. It offers various solutions which address issues in resources, eco friendly infrastructure and environmental health. Covering topics such as real time monitoring, indoor environment quality and coastal cities, this book is an excellent resource for architects, engineers, sustainability practitioners, researchers, academicians and more. **Connecting America** Barry Leonard, 2010-11. Broadband is the great infrastructure challenge of the early 21st century. Broadband is a foundation for economic growth, job creation, global competitiveness and a better way of life. The number of Americans who have broadband at home has grown from 8 million in 2000 to nearly 200 million last year. But 100 million Americans do not have broadband at home. In early 2009, Congress directed the FCC to develop a National Broadband Plan to ensure that every American has access to broadband capability. This plan must also include a strategy for achieving affordability and maximizing use of broadband. The plan presented here ensures that the entire broadband ecosystem, networks, devices, content and applications, is healthy. *Illus heise online special* heise online-Redaktion, 2021-08-19. Quantitative Logic and Soft Computing Bing-Yuan Cao, Shuili Chen, Guojun Wang, Sicong Guo, 2010-10-14 Admittedly the notion intelligence or intelligent computing has been around us for several decades implicitly indicating any non conventional methods of solving complex system problems such as expert systems and intelligent control techniques that mimic human skill and replace human operators for automation Various kinds of intelligent methods have been suggested phenomenological or ontological and we have been witnessing quite successful applications On the other hand Soft Computing Techniques is the concept coined by Lot Zadeh referring to a set of approaches of computing which parallels the remarkable ability of the human mind to reason and learn in an environment of uncertainty imprecision and partial truth Such a notion is well contrasted with the conventional binary logic based hard computing and has been effectively utilized with the guiding principle of exploiting the tolerance for uncertainty imprecision and partial truth to achieve tractability robustness and low solution cost The soft computing techniques are often employed as the technical entities in a tool box with tools being FL ANN Rough Set GA etc Based on one's intuition and experience an engineer can build and realize human like systems by smartly mixing proper technical tools effectively and efficiently in a wide range of fields For some time the soft computing techniques are also referred to as intelligent computing tools
