Artificial Intelligence and the Future of Healthcare Jon-Arild Johannessen, 2024-07-19 The application of Artificial Intelligence AI in the healthcare sector is certain to boost levels of automation and productivity but paradoxically it will also increase the availability of first line competence At the same time as demographic trends are affecting demand for health and social care the technological developments we are seeing make it highly likely that AI will play a decisive role in tackling the challenges our healthcare systems will encounter This book reveals systemic connections to tackle questions about the potential impact of AI on future challenges in the healthcare sector Specifically it develops practical proposals for ways in which AI can be applied to solve these forthcoming issues It emphasizes the importance of AI in what is known in the literature as human augmentation The book s innovative perspective is apparent in the way it challenges conventional wisdom in the context of several pressing questions such as What opportunities and challenges could arise from the application of AI in the healthcare sector How can the philosophy of medicine viewed from a systemic perspective help us to understand explain and resolve some of the future challenges in the healthcare sector How could AI affect inclusive employment opportunities for people with disabilities The book also contains an underlying argument to the effect that the rational approach adopted by economists is perhaps less rational when applied to a healthcare sector that is crying out for more first line competence The primary readership will be academic but the book will also appeal to policymakers consultants HR departments healthcare stakeholders and related practitioners

Johannessen, 2023-09-15 The innovation economy is the driver for the development of the Fourth Industrial Revolution and consequently there is a growing focus on innovation in general and technological innovation in particular In this context there is much to suggest that it is the triple impact of artificial intelligence big data and 5G and 6G networks that will go beyond the limits of existing competence This book is about the new competence that is emerging in the wake of artificial intelligence and intelligent robots It explains how these two technologies are completely fundamental to what is known as the Fourth Industrial Revolution The author argues that artificial intelligence will promote automation which will reduce wages rather than increase unemployment statistics The book posits that when the utility value of technology and the rate of dissemination of technology is high people who have the necessary competence will both future proof their jobs in the labour market and also be among the highest paid workers in the new economy that is emerging from the innovation economy Further by making education more compatible with new technology will enable graduates to access more secure and better paid jobs and all behavioural fields related to new technology will flourish because they can be used in many contexts to steer people's behaviour in certain directions through the integration of big data and artificial intelligence The book employs the following scholarly methods conceptual generalization scenario based thinking and historical economic methodology thus it will be of particular benefit to academic scholars researchers and graduate students who are concerned with the impact of the fourth industrial revolution on the labour market *Innovation and Economic Development* Jon-Arild

Johannessen, 2025-10-22 Microeconomic theorists have largely excluded entrepreneurship and innovation from their theoretical analyses and models In the existing literature innovative entrepreneurs are hardly mentioned at all yet it is precisely these entrepreneurs who through their establishment of innovation based start ups for example start ups based on technological innovations create economic growth and help promote prosperity worldwide The most recent examples from the digital revolution alone such as Microsoft Apple and TikTok speak to the importance of innovative entrepreneurship This

book addresses the lack of microeconomic theory concerning the role of innovation as a driver for economic development and explores the topic from multiple perspectives innovative entrepreneurship competence productivity automation and the institutional framework By analysing these five pillars the book provides a broad idea of how these interactions all impact how the innovation economy continues to thrive The book also describes the application of theory to real life by providing practical and real life examples and case studies It demonstrates the need to foster the spirit of innovation and entrepreneurship for sustainable development as a key driver of uninterrupted industrial development It also highlights the critical gap in conventional economic models which reduce everything to a single number and fail to analyse how innovation shapes both economic structures and the education systems and policies needed to adapt to them By incorporating systems thinking and evolutionary economics the book offers a multidimensional analysis of the innovation economy This broad perspective enhances its theoretical depth and widens its appeal to scholars and researchers across various disciplines Its practical approach also makes the book relevant to policymakers educators and practitioners
