

Transmission Oil

Oil in the transmission deteriorates and its lubrication performance decreases if it is used too long. It should therefore be changed periodically.

To change:

- 1) Remove the oil filler cap and oil drain plug located on the bottom of the engine and drain the transmission case.

Note: If possible, do this while the engine is warm and the oil viscosity is low.

- 2) Reinstall the drain plug

① Oil filler cap

① Drain plug

- 3) Measure 500 cc (1.06/0.88 US/Imp pt) of the recommended oil (See page 7.) in a measuring beaker and pour it into the transmission chamber slowly.

① Measuring beaker

- 4) Refit the oil filler cap.

Clutch

Clutch adjustment is made in two stages, i.e., adjustment of play in the clutch cable and the clutch release mechanism.

① Clutch cable adjuster

- 2) Loosen the release screw locking nut temporarily with a 10 mm open end wrench and turn in the release adjusting screw until it stops slightly and then back it out $\frac{1}{4}$ turn.

① Release adjusting screw ② Release screw locking nut

- 3) Secure the release screw locking nut.

The Digestive Tract of Cephalopods: at the Interface Between Physiology and Ecology Giovanna Ponte,Eduardo Almansa,Paul Andrews,2019-03-25 Aristotle in the *Historia animalium* Book IV gives one of the earliest descriptions of the anatomy of the cephalopod digestive tract comparing it to that of other molluscs From dissections of cuttlefish several key features of the cephalopod digestive tract were described the beak teeth and radula tongue the passage of the oesophagus through the brain en route to the crop and stomach The stomach is described as having spiral convolutions like a trumpet snail shell suggesting that the structure described is actually the caecum The gut then turns anteriorly so that the anal opening is near the funnel leading a modern author to comment that they defaecate on their heads Leroi 2014 In the intervening two millennia research on the cephalopod digestive tract has been sporadic with much of the current knowledge arising from a series of studies in the 1950s to the 1970s by A M Bidder E Boucaud Camou R Boucher Rodoni and K Mangold which established the basic mechanisms of digestion and absorption e g Bidder 1950 Boucaud Camou et al 1976 The last 10 years has seen a resurgence of research on the digestive tract stimulated by interest cephalopods particularly *Octopus vulgaris* and *Sepia officinalis* as candidate species for aquaculture and the potential impact of climate change on cephalopod ecology Additionally the inclusion of cephalopods in the European Union legislation regulating scientific research has

necessitated improved understanding of dietary requirements and metabolism as well as the development of methods to monitor digestive tract function to ensure optimal care and welfare in the laboratory Prompted by this resurgence of interest in the cephalopod digestive tract and an international workshop on the topic held in November 2015 we have collected a series of papers reflecting the current state of the art The seventeen papers in this book combine original research publications and reviews covering a diversity of topics that are grouped under four main themes reflecting key topics in the physiology and ecology of the cephalopod digestive tract feeding strategies early life stages and aquaculture anatomy and digestive physiology care and welfare This book provides a timely synthesis of ongoing research into the cephalopod digestive tract which we hope will stimulate further studies into this relatively neglected aspect of cephalopod biology
