Democratizing Finance Marion Laboure, Nicolas Deffrennes, 2022-01-01 We are only in the early stages of a broader revolution that will impact every aspect of the global economy including commerce and government services Coming financial technology innovations could improve the quality of life for all people Over the past few decades digital technology has transformed finance Financial technology fintech has enabled more people with fewer resources in more places around the world to take advantage of banking insurance credit investment and other financial services Marion Laboure and Nicolas Deffrennes argue that these changes are only the tip of the iceberg A much broader revolution is under way that if steered correctly will lead to huge and beneficial social change The authors describe the genesis of recent financial innovations and how they have helped consumers in rich and poor countries alike by reducing costs increasing accessibility and improving convenience and efficiency They connect the dots between early innovations in financial services and the wider revolution unfolding today Changes may disrupt traditional financial services especially banking but they may also help us address major social challenges opening new career paths for millennials transforming government services and expanding the gig economy in developed markets Fintech could lead to economic infrastructure developments in rural areas and could facilitate emerging social security and healthcare systems in developing countries The authors make this case with a rich combination of economic theory and case studies including microanalyses of the effects of fintech innovations on individuals as well as macroeconomic perspectives on fintech s impact on societies While celebrating fintech s achievements to date Laboure and Deffrennes also make recommendations for overcoming the obstacles that remain The stakes improved quality of life for all people could not be higher

this book regarding the topics covered in the syllabus *Digital Currency* Fouad Sabry, 2021-11-25 What Is Digital Currency
While all cryptocurrencies can be termed as digital currencies the reverse is not true Cryptocurrencies are managed by a
computer algorithm while digital currencies are backed by an authority Now digital currencies exhibit properties like other
currencies but do not have a physical form like that of banknotes and coins You can receive transfer and or exchange digital

currency for another currency For example it can be used to pay for goods and services in an online store Cryptocurrencies like Bitcoin and Ethereum are pieces of computer code that are not managed by any authority Creation as well as use is maintained through a distributed ledger typically a blockchain that serves as a public financial transaction database So cryptocurrencies typically use decentralized control where there is no presence of a third party to have authority over the investor One of the most significant differences between digital currency and cryptocurrency is the underlying technology Digital currency is a digital format of fiat money whereas cryptocurrencies are built on the blockchain Cryptocurrencies are not under the control of any single entity Digital currency however is under the direct control of the central bank When it comes to digital currency the issuing authority is of prime importance
