Management Enabling the Future Internet for Changing Business and New Computing Services Choong Seon Hong, Toshio Tonouchi, Yan Ma, Chi-Shih Chao, 2009-09-19 We are delighted to present the proceedings of the 12th Asia Pacific Network Operations and Management Symposium APNOMS 2009 which was held in Jeju Korea during September 23-25, 2009. Recently, various convergences in wired and wireless networks and convergence of telecommunications and broadcastings are taking place for ubiquitous multimedia service provisioning. For example, broadband IP MPLS wired networks are actively converged with IEEE 802.11e wireless LAN, IEEE 802.16 Wireless MAN, 3G/4G wireless cellular networks, and direct multimedia broadcast DMB networks. For efficient support of service provisioning for ubiquitous multimedia services, on the broadband convergence networks, well designed and implemented network operations and management functions with QoS guaranteed traffic engineering are essential. The converged network will open the way for a new world with emerging new businesses and computing services. The Organizing Committee (OC) selected *Management Enabling the Future Internet for Changing Business and New Computing Services* as the timely theme of APNOMS 2009. Contributions from academia, industry, and research institutions met these challenges with 173 paper submissions, from which 41 high quality papers (23.7% of the submissions) were selected for technical sessions as full papers, and 32 papers were selected as short papers. In addition, we had nine papers in innovation sessions for on-going research. Diverse topics were covered, including Traffic Trace Engineering, Configuration and Fault Management, Management of IP Based Networks, Autonomous and Distributed Control, Sensor Network and P2P Management, Converged Networks, and Traffic Engineering, SLA and QoS Management, Active and Security Management, Wireless and Mobile Network Management, and Security Management.
