Ian White, 2007-05-30 This detailed history of Air Intercept radar traces the development of this vital military technology with the Royal Air Force during WWII In the years after World War I the United Kingdom was desperate to develop some form of protection from an enemy air strike As early as 1923 the British Army had devised sound mirrors that could detect aircraft up to twelve miles away This technical history traces the development of military radar technology from this early experimental phase to the creation of the first air to air radar systems and their uses in battle Historian Ian White sets this fascinating narrative within the larger political military economic and technological context of the era Through World War II Air Intercept radar was a vital asset in protecting RAF bomber forces as well as the country itself But developing the technology required the tireless work of physicists and engineers in the Air Ministry Research Establishment particularly members of the Establishment's Airborne Group working under Dr Edward Bowen Their Airborne Interception radars such as the AI Mk IV were used in Blenheim night fighters during the winter Blitz and by Mosquito during the Baedeker Raids This in depth

history covers the introduction of centimetric technology at the Telecommunications Research Establishment the creation of centimetric AI and their installation in the Beaufighter and later marks of the Mosquito It describes the creation of the Radiation Laboratory at MIT and concludes with a section on further developments during the Cold War

Hands-On Artificial Intelligence for Beginners Patrick D. Smith, 2018-10-31 Grasp the fundamentals of Artificial Intelligence and build your own intelligent systems with ease Key Features Enter the world of AI with the help of solid concepts and real world use cases Explore AI components to build real world automated intelligence Become well versed with machine learning and deep learning concepts Book Description Virtual Assistants such as Alexa and Siri process our requests Google's cars have started to read addresses and Amazon's prices and Netflix's recommended videos are decided by AI Artificial Intelligence is one of the most exciting technologies and is becoming increasingly significant in the modern world Hands On Artificial Intelligence for Beginners will teach you what Artificial Intelligence is and how to design and build intelligent applications This book will teach you to harness packages such as TensorFlow in order to create powerful AI systems You will begin with reviewing the recent changes in AI and learning how artificial neural networks ANNs have enabled more intelligent AI You'll explore feedforward recurrent convolutional and generative neural networks FFNNs RNNs CNNs and GNNs as well as reinforcement learning methods In the concluding chapters you'll learn how to implement these methods for a variety of tasks such as generating text for chatbots and playing board and video games By the end of this book you will be able to understand exactly what you need to consider when optimizing ANNs and how to deploy and maintain AI applications What you will learn Use TensorFlow packages to create AI systems Build feedforward convolutional and recurrent neural networks Implement generative models for text generation Build reinforcement learning algorithms to play games Assemble RNNs CNNs and decoders to create an intelligent assistant Utilize RNNs to predict stock market behavior Create and scale training pipelines and deployment architectures for AI systems Who this book is for This book is designed for beginners in AI aspiring AI developers as well as machine learning enthusiasts with an interest in leveraging various algorithms to build powerful AI applications

OECD Artificial Intelligence Review of Germany OECD, 2024-06-11 This report provides an international benchmarking of Germany's artificial intelligence AI ecosystem and discusses progress in implementing its national AI strategy The report draws on quantitative and qualitative data and insights from the OECD AI Policy Observatory and from the OECD Programme on AI in Work Innovation Productivity and Skills AI WIPS an OECD research programme financed by the German Federal Government and results from a series of interviews with a wide range of stakeholders in Germany The review discusses Germany's strengths weaknesses opportunities and challenges in AI and provides recommendations to steer AI policy in Germany in the coming years The evidence is presented according to the core focus areas outlined in Germany's national AI strategy which include 1 minds 2 research 3 transfer and applications 4 the world of work 5 policy and regulatory frameworks and 6 society Furthermore the report discusses AI infrastructure and it includes
