Norman Cameron, Joseph F. Rychlak, 1985 The purpose of this book is to present a picture of the inner life of man as it interacts with the surroundings as it is experienced and as it is expressed in normal behaviour and psychopathology Man's inner life is always a significant source of action and it arouses in other persons through its behavioural expression some of their most important experiences The dynamic interplay of each person's inner life his behavioural expressions and the experiences he arouses in others are the major forces that constitute society and go to form the culture in which human beings live Comparisons with the circumstances of animal life where the environment is much simpler and the reactions to it far less flexible bring out sharp contrasts as well as some similarities Throughout this book the importance of infancy and early childhood is strongly emphasized

On Being Normal and Other Disorders
Paul Verhaeghe, 2020-06-16 The central argument of On Being Normal and Other Disorders is that psychic identity is acquired through one's primary intersubjective relationships Thus the diagnosis of potential pathologies must also be founded on this relation Given that the efficacy of all forms of treatment depends upon the therapeutic relation a diagnostic of this sort has wide ranging applications The author's critical evaluation of the contemporary DSM diagnostic shows that the lack of reference to and governing metapsychology impinges on the therapeutic value of the DSM categories In response to this problem the author sketches out the foundations of such a metapsychology by combining a Freud-Lacanian approach with contemporary empirical research Close attention is paid to the processes of identity acquisition to show how the self and the Other are not two separate entities Rather subject formation is seen as a process in which both the subject's and the Other's identity as well as the relationship between them comes into being
