Theory and Principled Methods for the Design of Metaheuristics Yossi Borenstein, Alberto Moraglio, 2013-12-19 Metaheuristics and evolutionary algorithms in particular are known to provide efficient adaptable solutions for many real world problems but the often informal way in which they are defined and applied has led to misconceptions and even successful applications are sometimes the outcome of trial and error Ideally theoretical studies should explain when and why metaheuristics work but the challenge is huge mathematical analysis requires significant effort even for simple scenarios and real life problems are usually quite complex In this book the editors establish a bridge between theory and practice presenting principled methods that incorporate problem knowledge in evolutionary algorithms and other metaheuristics The book consists of 11 chapters dealing with the following topics theoretical results that show what is not possible an assessment of unsuccessful lines of empirical research methods for rigorously defining the appropriate scope of problems while acknowledging the compromise between the class of problems to which a search algorithm is applied and its overall expected performance the top down principled design of search algorithms in particular showing that it is possible to design algorithms that are provably good for some rigorously defined classes and finally principled practice that is reasoned

and systematic approaches to setting up experiments metaheuristic adaptation to specific problems and setting parameters With contributions by some of the leading researchers in this domain this book will be of significant value to scientists practitioners and graduate students in the areas of evolutionary computing metaheuristics and computational intelligence
