Generative AI Ravindra Das,2024-10-10 The cybersecurity landscape is changing for sure For example one of the oldest threat variants is that of phishing It evolved in the early 1990s but even today it is still being used as a primary threat variant and has now become much more sophisticated covert and stealthy in nature For example it can be used to launch ransomware social engineering and extortion attacks The advent of Generative AI is making this much worse For example a cyberattacker can now use something like ChatGPT to craft the content for phishing emails that are so convincing that it is almost impossible to tell the difference between what is real and what is fake This is also clearly evident in the use of deepfakes where fake images of real people are replicated to create videos to lure unsuspecting victims to a fake website But Generative AI can also be used for the good to combat Phishing Attacks This is the topic of this book In this we cover the following A review of phishing A review of AI Neural Networks and Machine Learning A review of Natural Language Processing Generative AI and the Digital Person A proposed solution as to how Generative AI can combat phishing attacks as they relate to Privileged Access accounts
