some impacts and became a recurring theme in literature related to human development. The intervention of government or the quality of government become crucially important in relation to the high achievement of human development. Whereas an effort in improving society's welfare is through economic development. One of dominant aspects in economic development is through legal development. Good law or policy in such country will have some impacts to the existence of good economic growth because supremacy of law is one aspect of a good governance. Law supremacy is an important institution which is related to economic growth because rule of law ensures personal safety, property rights, unbiased contract enforcement, stability of politics, freedom of speech, and control of corruption. According to those various issues and debates on economic legal development and good governance, then the Doctoral Program of the Faculty of Law Sebelas Maret University needs to hold an international conference as a place in exchanging some academic ideas in order to contribute to those legal issues with a theme: INTERNATIONAL CONFERENCE ON LAW, ECONOMICS AND GOOD GOVERNANCE. Partial Identification in Econometrics and Related Topics Nguyen Ngoc Thach, Nguyen Duc Trung, Doan Thanh Ha, Vladik Kreinovich, 2024-07-31. This book covers data processing techniques with economic and financial application being the unifying theme. To make proper investments in economy, the authors need to have a good understanding of the future trends: how will demand change, how will prices change, etc. In general, in science, the usual way to make predictions is to identify a model that best fits the current dynamics and to use this model to predict the future behavior. In many practical situations, especially in economics, our past experiences are limited. As a result, the authors can only achieve a partial identification. It is therefore important to be able to make predictions based on such partially identified models, which is the main focus of this book. This book emphasizes partial identification techniques but it also describes and uses other econometric techniques ranging from more traditional statistical techniques to more innovative ones such as game theoretic approach, interval techniques, and machine learning. Applications range from general analysis of GDP growth, stock market, and consumer prices to analysis of specific sectors of economics: credit and banking, energy, health, labor, tourism, international trade, to specific issues affecting economy such as ecology, national culture, government regulations, and the existence of shadow economy. This book shows what has been achieved but even more important are remaining open problems. The authors hope that this book will inspire practitioners to learn how to apply state-of-the-art techniques, especially techniques of optimal transport statistics, to economic and financial problems and inspire researchers to further improve the existing techniques and to come up with new techniques for studying economic and financial phenomena. The authors want to thank all the authors for their contributions and all anonymous referees for their thorough analysis and helpful comments. The publication of this book and organization of the conference at which these papers were presented was supported by the Ho Chi Minh University of Banking HUB Vietnam and by the Vingroup Innovation Foundation VINIF. The authors thank the leadership and staff of HUB and VINIF for providing crucial support.
