Online Scheduling in Manufacturing Haruhiko Suwa, Hiroaki Sandoh, 2012-10-11 Online scheduling is recognized as the crucial decision making process of production control at a phase of being in production according to the released shop floor schedule Online scheduling can be also considered as one of key enablers to realize prompt capable to promise as well as available to promise to customers along with reducing production lead times under recent globalized competitive markets Online Scheduling in Manufacturing introduces new approaches to online scheduling based on a concept of cumulative delay The cumulative delay is regarded as consolidated information of uncertainties under a dynamic environment in manufacturing and can be collected constantly without much effort at any points in time during a schedule execution In this approach the cumulative delay of the schedule has the important role of a criterion for making a decision whether or not a schedule revision is carried out The cumulative delay approach to trigger schedule revisions has the following capabilities for the practical decision making 1 To reduce frequent schedule revisions which do not necessarily improve a current situation with much expense for its operation 2 To avoid overreacting to disturbances dependent on strongly an individual shop floor circumstance and 3 To simplify the monitoring process of a schedule status Online Scheduling in Manufacturing will be of interest to both practitioners and researchers who work in planning and scheduling in manufacturing Readers will find the importance of when to revise policies during a schedule execution and their influences on scheduling results **Oracle 11g**

This IBM Redbooks publication provides useful implementation scenarios and configuration recommendations for many of the TCP/IP standard applications that z/OS Communications Server supports. For more specific information about z/OS Communications Server standard applications, high availability and security, see the other volumes in the series: IBM z/OS V1R13 Communications Server TCP/IP Implementation Volume 1: Base Functions, Connectivity and Routing (SG24-7996); IBM z/OS V1R13 Communications Server TCP/IP Implementation Volume 3: High Availability, Scalability and Performance (SG24-7998); IBM z/OS V1R13 Communications Server TCP/IP Implementation Volume 4: Security and Policy Based Networking (SG24-7999). For comprehensive descriptions of the individual parameters for setting up and using the functions that we describe in this book, along with step-by-step checklists and supporting examples, see the following publications: z/OS Communications Server IP Configuration Guide (SC31-8775); z/OS Communications Server IP Configuration Reference (SC31-8776); z/OS Communications Server IP User's Guide and Commands (SC31-8780). This book does not duplicate the information in those publications. Instead, it complements them with practical implementation scenarios that can be useful in your environment. To determine at what level a specific function was introduced, see z/OS Communications Server New Function Summary (GC31-8771). For complete details, we encourage you to review the documents that are listed in the additional resources section at the end of each chapter.

Will Working from Home Stick in Developing Economies? Mrs. Marina Conesa Martinez, Mr. Futoshi Narita, Mr. Chris Papageorgiou, 2023-05-26. In developing economies, a shift to working from home during the COVID-19 pandemic varies substantially. An increase in teleworking days per week ranges from 0.7 to 17.6 percentage points across 10 developing countries covered by an online survey of about 500 respondents per country. An estimated income discount associated with telework disappeared temporarily at the onset of the pandemic. A calibrated model indicates that workers' preferences to telework may largely depend on their educational attainments. Whether telework will sustain in these countries could depend on obstacles to telework, particularly for workers with less education and a degree of economy-wide externality.

Enabling the Digital Age Stephan Paetrow, 2022-10-10. Mitte der 1960er Jahre entwickelte ein kleines Team bei ZEISS Oberkochen die ersten Objektive für die Belichtung integrierter Schaltkreise, die sogenannte Lithographieoptik. Schon damals gelang es, die Grenzen des Machbaren auszuloten und neu zu definieren. Seitdem trägt die ZEISS Lithographieoptik entscheidend dazu bei, immer höhere Rechenleistungen in immer kleineren Geräten zu ermöglichen. Diese Entwicklung wird auch als Moore's Law bezeichnet. Heute ist ZEISS das weltweit einzige Unternehmen, das Optiken für die neueste Generation der sogenannten EUV Lithographie liefern kann.
