system in order to achieve their specific goals Hence the process is in fact one of communication about communication or metacommunication Semiotic engineering has two methods to evaluate the quality of metacommunication in HCI the semiotic inspection method SIM and the communicability evaluation method CEM Up to now they have been mainly used and discussed in technical contexts focusing on how to detect problems and how to improve the metacommunication of specific systems In this book Clarisse de Souza and Carla Leit o discuss how SIM and CEM which are both qualitative methods can also be used in scientific contexts to generate new knowledge about HCI The discussion goes into deep considerations about scientific methodology calling the reader s attention to the essence of qualitative methods in research and the kinds of results they can produce To illustrate their points the authors present an extensive case study with a free open source digital audio editor called Audacity They show how the results obtained with a triangulation of SIM and CEM point at new research avenues not only for semiotic engineering and HCI but also for other areas of computer science such as software engineering and programming Table of Contents Introduction Essence of Semiotic Engineering Semiotic Engineering Methods Case Study with Audacity Lessons Learned with Semiotic Engineering Methods The Near Future of Semiotic Engineering
