Laurin, 2023-09-23 Significant health industry human resource needs increase the reliance on family and friends to support older adults hoping to age in place This book explores how recent improvements in integrated home technologies have the potential to address those challenges The book considers how embedded home sensors can be used to monitor the health and wellbeing of older adults and how that can be used to assist with supporting safety and well being The content is designed to help multiple stakeholders in the supportive smart home space to better understand the complexity of this field and the need for transdisciplinary collaboration These stakeholders include the older adults who will benefit from supportive smart home technology informal and formal caregiver and healthcare professionals concerned about the older adult s well being researchers from multiple disciplines in the supportive smart home area and their funders companies looking to develop solutions and services or expand their offerings policy makers who want to ensure privacy and equity in access and a successful integration of these technologies into the evolving health and social services sectors and students the future leaders in AgeTech Overall the intent of the book is to inspire engineers computer scientists industrial designers clinicians and healthcare providers social scientists students policy makers and older adults and their caregivers to collaborate in advancing the supportive smart home space to develop more options for aging in place **The Connected Home: The Future of Domestic Life** Richard Harper, 2012-01-11 The title of this new book The Connected Home reflects the move away from the idea that smart homes would alter the lives of those living in them by providing technologies to take over tasks that were previously the responsibility of the householder such as managing entertainment education and even eating Up until around 10 years ago this view was commonplace but time has

shown that the technologies to support a smart home have not developed in such a way as to support this premise. Instead, what people do in their homes has moved the concept of a smart home into that of the connected home. The rise of online games, technologies, video connections via Skype, social networking, internet browsing, etc. are now an integral part of the home environment and have had a significant effect on the home. The contributors to this exciting new book consider and discuss the effects and ramifications of the connected home from a variety of viewpoints: an examination of the take up of personal computers and the Internet in domestic situations; an analysis of the changing intersection of technology and human habits in the connected home; the impact of gaming, texting, e-book readers, tablets, and other devices and their effect on the social conditions of a household; the relationship between digital messaging applications and real geography; and an overview of how sensing technologies for the smart home might evolve. Lightweight medical technologies, for example, culminate by addressing unfinished ambitions from the smart home agenda, the factors that have prevented their realisation, and addresses the need for extending research into the area.
