Stored the Power to Say "No!" Dr. Homare Endo, 2025-08-12. This is a century-defining war without gunpowder, a systemic conflict that will determine the shape of the future world order. The so-called U.S.-China New Industrial War is not about traditional trade deficits or tariff disputes. Rather, it is a contest for global dominance in strategic emerging industries such as artificial intelligence, semiconductors, clean energy, and advanced manufacturing. The two superpowers are locked in an intense and multidimensional struggle across technological research, industrial chain control, capital deployment, and rule setting, rivaling the scale and intensity of the race during the Cold War. With overwhelming advantages in next-generation industries, China is saying no to the U.S. The real question behind this war is who will author the rules of the 21st-century global order. Who will hold sway over AI governance, green standards, and the architecture of digital civilization? This book offers a deep analysis of this asymmetric and protracted structural conflict, revealing the new industrial landscape that will shape the future of the world. Road to a More Intelligent World Pengfei Sun, 2025-05-31. This book provides an in-depth look at the current development of the fifth-generation mobile communication technology 5G and artificial intelligence AI, their technological advantages, application, and critical role in science and technology, as well as their future development trends.
