Female Robots and AI in Science Fiction Cinema Rebecca L. Jones, 2025-08-13. This book is the first comprehensive overview of the history of female presenting AI and robots in US and UK live action science fiction films from 1949 to 2023. It offers an original taxonomy that aids in the examination of 80 films and over 135 characters' representations starting with *The Perfect Woman* (1949) and ending with *Robots* (2023). Using its representational taxonomy, this book analyses the evolution of these depictions, showing the continuations, revisions and shifts in the depiction of female presenting AI and robots from objectified, eroticised, subordinated things to being autonomous moral agents who assert their right to equality and refuse their abusive, typically sexual use. This book shows how these fictional gendered constructions are products of a heterosexual cisgender male fantasy of an idealised subordinated form of femininity. These artificial characters, along with their real world counterparts, highlight a desire for a subordinated femininity but also show how that subordination is a social construction often reinforced and countered in onscreen depictions. By examining the trends within its asserted *Galatea*, *Girlfriend*, *Mother* and *Deadly Seductress* types, this book presents an exploration of what our female presenting artificial creations could be while addressing their contemporary and our current AI technologies and how science fiction is influencing real life while our reality seeks to mirror science fiction.
