

Reading Comprehension

Read the short passage and answer the questions.

The Dog and the Shadow

It happened that a Dog had got a piece of meat and was carrying it home in his mouth to eat it in peace. Now on his way home, he had to cross a plank lying across a running brook. As he crossed, he looked down and saw his own shadow reflected in the water beneath. Thinking it was another dog with another piece of meat, he made up his mind to have that also. So he made a snap at the shadow in the water, but as he opened his mouth the piece of meat fell out, dropped into the water and was never seen more.

1. What animal was crossing a board?

2. What did the dog have in his mouth?

3. What did the dog see in the running brook?

4. What is the moral of the story?

Signs for Developing Reading Emil Holmer, 2016-05-23 Reading development is supported by strong language skills not least in deaf and hard of hearing DHH children. The work in the present thesis investigates reading development in DHH children who use sign language attend Regional Special Needs Schools RSNS in Sweden and are learning to read. The primary aim of the present work was to investigate whether the reading skills of these children can be improved via computerized sign language based literacy training. Another aim was to investigate concurrent and longitudinal associations between skills in reading sign language and cognition in this population. The results suggest that sign language based literacy training may support development of word reading. In addition awareness and manipulation of the sub lexical structure of sign language seem to assist word reading and imitation of familiar signs i.e. vocabulary may be associated with developing reading comprehension. The associations revealed between sign language skills and reading development support the notion that sign language skills provide a foundation for emerging reading skills in DHH signing children. In addition the results also suggest that working memory and Theory of Mind ToM are related to reading comprehension in this population. Furthermore the results indicate that sign language experience enhances the establishment of representations of manual gestures and that progression in ToM seems to be typical although delayed in RSNS pupils. Working memory has a central role in integrating environmental stimuli and language mediated representations and thereby provides a platform for cross modal language processing and multimodal language development. En god språklig förmåga bidrar till god läsutveckling inte minst hos döv- och hörselskadade DHH barn. Studierna som ingår i avhandlingen undersöker läsutveckling hos DHH elever som gör teckenspråkiga specialskolor och som hellre på att lära sig att läsa. Arbetets huvudsakliga syfte var att undersöka om deras läsförmåga kan förbättras via datoriserad teckenspråksbaserad lästräning. Ett annat syfte var att undersöka samtida och longitudinella samband mellan läsförmåga, teckenspråk och kognition i samma population. Resultaten indikerar att teckenspråksbaserad lästräning kan bidra till ordläsningsutveckling. Vidare pekar resultaten på att medvetenhet om och manipulation av teckenspråkets sublexikala struktur stöttar läsförmågan och dessutom att imitation av kända tecken i.e. vokabulär var associerat med utvecklingen av barnens läsförståelse. Dessa fynd visar att teckenspråkskunskaper kan utgöra en grund för läsutveckling hos teckenspråkiga DHH elever. Resultaten indikerade även att arbetsminne och Theory of Mind ToM relaterade till läsförståelse i denna grupp. Vid sidan av resultaten rörande läsutveckling framkom också att teckenspråksfärdighet leder till starkare etablering av representationer av manuella gester och vidare att barnens mentaliseringsförmåga Theory of Mind uppvisade en förväntad progression om närvarande. En implikation av detta är att insatser som stöttar utveckling av teckenbaserade representationer och deras användning vid bearbetning av skrivet språk kan främja läsutveckling hos teckenspråkiga DHH elever. Arbetsminne försls genom sin roll i integration mellan inkommande stimuli och språkmedierade representationer fungera som en plattform för modalitetsverskridande språkbearbetning och multimodal språkutveckling. *Sign Language in*

Mainstream Education for the Deaf and Hard-of-hearing Students in Asia Gladys Tang, 2025-05-23 This book focuses on two means of recruiting sign language to support DHH students in mainstream education in Asia The first approach is educational sign interpreting which has been adopted to support signing DHH students in mainstream classrooms in Taiwan Contributions report on a questionnaire survey with post hoc interviews examining the reactions of students parents a resource teacher and an interpreter towards providing this service in the education system The second approach is co enrolment which involves bringing a critical mass of DHH students into the mainstream classroom for them to study with hearing children supported by either a deaf teacher or a teacher highly proficient in signing who co teaches with a regular teacher and co shares responsibilities in taking care of the whole class of students The chapters exemplifying this approach report on the effects of co enrolment on DHH students language development and academic attainment This book was originally published as a special issue of Deafness Education International

New Methods in Reading Comprehension Research David E. Kieras, Marcel A. Just, 2018-04-17 Published in 1984 this volume presents methodologies for studying the ongoing psychological processes that occur as a person reads a text as well as discussing the major findings that these methodologies have produced to provide a handbook of reading comprehension research techniques Focusing on the comprehension processes that occur when a person is reading rather than the representation that remains after the text has been read the methodologies use measures such as reading times that reflect ongoing processes rather than relying exclusively on conventional measures of memory performance such as recall These methods make use of computer technology for rapid and flexible stimulus representation and data acquisition This book will allow researchers and students to select appropriate methodologies to investigate a range of fascinating questions about reading comprehension

Text Complexity and Reading Comprehension Tests Erik Castello, 2008 Based on the analysis of a specially compiled corpus of internationally recognized English as a foreign language EFL reading tests at different levels of proficiency this volume explores the relation between the complexity of written texts and the difficulty of reading comprehension tests It brings together linguistic investigations into the text inherent complexity of the tests and a study of the data derived from their administration to groups of Italian university students The study of text complexity draws on corpus linguistics text linguistics and systemic functional linguistics Both quantitative and qualitative analyses are carried out on the language used in the reading texts and in the related tasks that make up the corpus of tests The assessment of test difficulty on the other hand is informed by research on language testing and in particular by findings and methodologies of Classical Test Theory and Item Response Theory Relevant aspects of these theories are used to analyze and interpret both the data obtained from the administration of the tests and the data collected by means of feedback questionnaires completed by test takers The application of such diverse methodologies and the subsequent comparison of the results of the analyses has brought out interesting correlations between text inherent complexity perceived test difficulty and actual test difficulty

Theoretical Models and Processes of Literacy Donna E.

Alvermann, Norman J. Unrau, Misty Sailors, Robert B. Ruddell, 2018-10-03 The Seventh Edition of this foundational text represents the most comprehensive source available for connecting multiple and diverse theories to literacy research broadly defined and features both cutting edge and classic contributions from top scholars. Two decades into the 21st century the Seventh Edition finds itself at a crossroads and differs from its predecessors in three major ways: the more encompassing term literacy replaces reading in the title to reflect sweeping changes in how readers and writers communicate in a digital era; the focus is on conceptual essays rather than a mix of essays and research reports in earlier volumes; and most notably, contemporary literacy models and processes enhance and extend earlier theories of reading and writing. Providing a tapestry of models and theories that have informed literacy research and instruction over the years, this volume's strong historical grounding serves as a springboard from which new perspectives are presented. The chapters in this volume have been selected to inspire the interrogation of literacy theory and to foster its further evolution. This edition is a landmark volume in which dynamic dialogic and generative relations of power speak directly to the present generation of literacy theorists and researchers without losing the historical contexts that preceded them. Some additional archival essays from previous editions are available on the book's eResource. New to the Seventh Edition: Features chapters on emerging and contemporary theories that connect directly to issues of power and contrasts new models against more established counterparts. New chapters reflect sweeping changes in how readers and writers communicate in a digital era. Slimmer volume is complemented by some chapters from previous editions available online.

same time as raising questions about the feasibility and relevance of such initiatives to the literacy co ordinators and consultants and for all those undertaking further study or research in literacy education *The Role of Working Memory and Executive Function in Communication under Adverse Conditions* Mary Rudner,Carine Signoret,2016-06-20

Communication is vital for social participation However communication often takes place under suboptimal conditions This makes communication harder and less reliable leading at worst to social isolation In order to promote participation it is necessary to understand the mechanisms underlying communication in different situations Human communication is often speech based either oral or written but may also involve gesture either accompanying speech or in the form of sign language For communication to be achieved a signal generated by one person has to be perceived by another person attended to comprehended and responded to This process may be hindered by adverse conditions including factors that may be internal to the sender e g incomplete or idiosyncratic language production occur during transmission e g background noise or signal processing or be internal to the receiver e g poor grasp of the language or sensory impairment The extent to which these factors interact to generate adverse conditions may differ across the lifespan Recent work has shown that successful speech communication under adverse conditions is associated with good cognitive capacity including efficient working memory and executive abilities such as updating and inhibition Further frontoparietal networks associated with working memory and executive function have been shown to be activated to a greater degree when it is harder to achieve speech comprehension To date less work has focused on sign language communication under adverse conditions or the role of gestures accompanying speech communication under adverse conditions It has been proposed that the role of working memory in communication under such conditions is to keep fragments of an incomplete signal in mind updating them as appropriate and inhibiting irrelevant information until an adequate match can be achieved with lexical and semantic representations held in long term memory Recent models of working memory highlight an episodic buffer whose role is the multimodal integration of information from the senses and long term memory It is likely that the episodic buffer plays a key role in communication under adverse conditions The aim of this research topic is to draw together multiple perspectives on communication under adverse conditions including empirical and theoretical approaches This will facilitate a scientific exchange among individual scientists and groups studying different aspects of communication under adverse conditions and or the role of cognition in communication As such this topic belongs firmly within the field of Cognitive Hearing Science Exchange of ideas among scientists with different perspectives on these issues will allow researchers to identify and highlight the way in which different internal and external factors interact to make communication in different modalities more or less successful across the lifespan Such exchange is the forerunner of broader dissemination of results which ultimately may make it possible to take measures to reduce adverse conditions thus facilitating communication Such measures might be implemented in relation to the built environment the design of hearing aids and public awareness *Handbook of Research on Reading*

The Oxford Handbook of Deaf Studies in Learning and Cognition Marc Marschark, Harry Knoors, 2020-04-15 In recent years the intersection of cognitive psychology developmental psychology and neuroscience with regard to deaf individuals has received increasing attention from a variety of academic and educational audiences Both research and pedagogy have addressed questions about whether deaf children learn in the same ways that hearing children learn how signed languages and spoken languages might affect different aspects of cognition and cognitive development and the ways in which hearing loss influences how the brain processes and retains information There are now a number of preliminary answers to these questions but there has been no single forum in which research into learning and cognition is brought together The Oxford Handbook of Deaf Studies in Learning and Cognition aims to provide this shared forum focusing exclusively on learning cognition and cognitive development from theoretical psychological biological linguistic social emotional and educational perspectives Each chapter includes state of the art research conducted and reviewed by international experts in the area Drawing this research together this volume allows for a synergy of ideas that possesses the potential to move research theory and practice forward
