University Rankings, Diversity, and the New Landscape of Higher Education, 2019-02-18 University rankings are a relatively new phenomenon in higher education Although quite an established practice in the U S it is only within the last decade that attempts to analyse university performance have spread to the rest of the world and that we also have seen new global rankings appear rankings attempting to measure university performance beyond national borders No wonder that this trend is accompanied by a growing interest in studying rankings throughout the world This book is written as part of the effort to better understand rankings and their effects on higher education A serious approach towards university rankings implies that rankings should be analysed properly including the methods used and the indicators chosen and investigate the objectives claimed If university rankings are considered as consumer information then everyone should have an interest in basing such guidance on valid and reliable data and methodology A serious analysis should also discuss the wider

Rankings and the Mediatization of Higher Education Michelle Stack,2016-04-12 Higher Education Institutions simultaneously critique and participate in national and international rankings of universities However this creates a difficult situation since if universities do participate in rankings they acquiesce to a system based in media logics that has little to do with academic norms of research If they do not participate in the rankings they risk losing public funding students and donors in an increasingly competitive and globalized environment This book delves into the influence of journalists business tycoons and multinational corporations in defining what world class is and how it will be measured Rankings provide us with a rich study for understanding how universities define deploy and manage their assets and liabilities in a mediatized globalized economy **Rankings and Accountability in Higher Education: Uses and Misuses** Priscilla Toka

Mmantsetsa Marope,Peter J. Wells,Unesco,Ellen Hazelkorn,2013-01-01 The growing impact of university rankings on public policy and on students choices has stirred controversy worldwide This unique volume brings together the architects of university rankings and their critics to debate the uses and misuses of existing rankings With voices from five continents it provides a comprehensive overview of current thinking on the subject and sets out alternative approaches and complementary tools for a new era of transparent and informed use of higher education ranking tables *Knowledge for Sale* Lawrence Busch,2023-09-19 How free market fundamentalists have shifted the focus of higher education to competition metrics consumer demand and return on investment and why we should change this A new philosophy of higher education has taken hold in institutions around the world Its supporters disavow the pursuit of knowledge for its own sake and argue that the only knowledge worth pursuing is that with more or less immediate market value Every other kind of learning is downgraded its budget cut In *Knowledge for Sale* Lawrence Busch challenges this market driven approach The rationale for the current thinking Busch explains comes from neoliberal economics which calls for reorganizing society around the needs of the market The market influenced changes to higher education include shifting the cost of education from the state to the individual turning education from a public good to a private good subject to consumer demand redefining higher education as a search for the highest paying job and turning scholarly research into a competition based on metrics including number of citations and value of grants Students administrators and scholars have begun to think of themselves as economic actors rather than seekers of knowledge Arguing for active resistance to this takeover Busch urges us to burst the neoliberal bubble to imagine a future not dictated by the market a future in which there is a more educated citizenry and in which the old dichotomies market and state nature and culture and equality and liberty break down In this future universities value

learning and not training scholarship grapples with society's most pressing problems rather than quick fixes for corporate interests and democracy is enriched by its educated and engaged citizens **University Rankings** William Yat Wai

Lo, 2014-02-17 This book adopts a qualitative case study approach to provide the readers with a systematic delineation and interpretation of the implications of the university ranking phenomenon for Taiwan's higher education system. It reviews the literature on different theories concerning the global transformation of higher education and presents basic information on higher education in Taiwan. The author develops a four-dimensional framework for the analysis of the ranking phenomenon in the island state. First, the technological-ecological dimension aims to look into how the rankings have impacted Taiwan's higher education based on empirical findings from five Taiwanese public universities. Next, the technological-geographical dimension examines how Taiwan can use rankings to promote its interests in global higher education. The two conceptual dimensions focus on the relationship between the rankings and power in higher education. They show how the phenomenon can be read and explained through theoretical lenses from ecological and geographical perspectives. From an ecological perspective, the empirical evidence suggests that the influence of rankings varies throughout the academic hierarchy in Taiwan. The theoretical analysis then illustrates the relationship between the ranking phenomenon and the power structure in academic hierarchy. Geographically, while the empirical analysis is based on data from Taiwan, the theoretical analysis offers essential insights that help readers to understand the changing global landscape of higher education and its implications in East Asia. *Global Rankings and the Geopolitics of Higher Education* Ellen Hazelkorn, 2016-11-18 Global rankings and the Geopolitics of Higher Education is an examination of the impact and influence that university rankings have had on higher education policy and public opinion in recent years. Bringing together some of the most informed authorities on this very complex issue, this edited collection of specially commissioned chapters examines the changes affecting higher education and the implications for society and the economy. Split into four interrelated sections, this book covers: The development of rankings in higher education; how they have impacted upon both the production of knowledge and its geography and their influence in shaping policymaking; Overviews of the significance of rankings for higher education systems in Europe, Asia, Africa, Russia, South America, India, and North America; An analysis of rankings in relation to key concerns that pervade contemporary higher education; Examination of the role rankings are likely to play in the future directions for higher education. This is a significant scholarly work that analyses in depth an important development in higher education systems and which is likely to have an important influence upon how we understand the higher education policy-making process, past, present, and future. It provides new analysis and conceptual understanding for researchers and firm evidence for policy makers to use when addressing the value of rankings in measuring the quality of their institutions. Besides bringing together a powerful cast of academics, this book incorporates contributions from heads of important international higher education organisations from both those involved in making and also in administering key decisions. This timely, reflective, and
