Short-Term Load

Forecasting 2019 Antonio Gabaldón, María Carmen Ruiz-Abellón, Luis Alfredo Fernández-Jiménez, 2021-02-26 Short term load forecasting STLF plays a key role in the formulation of economic reliable and secure operating strategies planning scheduling maintenance and control processes among others for a power system and will be significant in the future However there is still much to do in these research areas The deployment of enabling technologies e g smart meters has made high granularity data available for many customer segments and to approach many issues for instance to make forecasting tasks feasible at several demand aggregation levels The first challenge is the improvement of STLF models and their performance at new aggregation levels Moreover the mix of renewables in the power system and the necessity to include more flexibility through demand response initiatives have introduced greater uncertainties which means new challenges for STLF in a more dynamic power system in the 2030 50 horizon Many techniques have been proposed and applied for STLF including traditional statistical models and AI techniques Besides distribution planning needs as well as grid modernization have initiated the development of hierarchical load forecasting Analogously the need to face new sources of uncertainty in the power system is giving more importance to probabilistic load forecasting This Special Issue deals with both fundamental research and practical application research on STLF methodologies to face the challenges of a more distributed and customer centered power system
