Christopher J. Budd,Christopher Sangwin,2001-05-17 This book is a series of self contained workshops in mathematics which aim to enthuse and inspire young people their parents and teachers with the joy and excitement of modern mathematics Written in an informal style each chapter describes how novel mathematical ideas relate directly to real life The chapters contain both a description of the mathematics and its applications together with problem sheets their solutions and ideas for further work project and field trips Topics include mazes folk dancing sundials magic castles codes number systems and slide rules This book should be accessible to young people from age thirteen upwards and yet contains material which should stretch the brightest students **Explorations in Number Theory** Cam McLeman,Erin McNicholas,Colin Starr,2022-12-18

This innovative undergraduate textbook approaches number theory through the lens of abstract algebra Written in an engaging and whimsical style this text will introduce students to rings groups fields and other algebraic structures as they discover the key concepts of elementary number theory Inquiry based learning IBL appears throughout the chapters allowing students to develop insights for upcoming sections while simultaneously strengthening their understanding of previously covered topics The text is organized around three core themes the notion of what a number is and the premise that it takes familiarity with a large variety of number systems to fully explore number theory the use of Diophantine equations as catalysts for introducing and developing structural ideas and the role of abstract algebra in number theory in particular the extent to which it provides the Fundamental Theorem of Arithmetic for various new number systems Other aspects of modern number theory including the study of elliptic curves the analogs between integer and polynomial arithmetic p adic arithmetic and relationships between the spectra of primes in various rings are included in smaller but persistent threads woven

through chapters and exercise sets Each chapter concludes with exercises organized in four categories Calculations and Informal Proofs Formal Proofs Computation and Experimentation and General Number Theory Awareness IBL Exploration worksheets appear in many sections some of which involve numerical investigations To assist students who may not have experience with programming languages Python worksheets are available on the book's website The final chapter provides five additional IBL explorations that reinforce and expand what students have learned and can be used as starting points for independent projects The topics covered in these explorations are public key cryptography Lagrange's four square theorem units and Pell's Equation various cases of the solution to Fermat's Last Theorem and a peek into other deeper mysteries of algebraic number theory Students should have a basic familiarity with complex numbers matrix algebra vector spaces and proof techniques as well as a spirit of adventure to explore the numberverse
