Artificial Intelligence and Universal Values Jay Friedenberg, 2024-07-14 The field of value alignment or more broadly machine ethics is becoming increasingly important as artificial intelligence developments accelerate By alignment we mean giving a generally intelligent software system the capability to act in ways that are beneficial or at least minimally harmful to humans There are a large number of techniques that are being experimented with but this work often fails to specify what values exactly we should be aligning When making a decision an agent is supposed to maximize the expected utility of its value function Classically this has been referred to as happiness but this is just one of many things that people value In order to resolve this issue we need to determine a set of human values that represent humanity's interests Although this problem might seem intractable research shows that people of various cultures and religions actually share more in common than they realize In this book we review world religions moral philosophy and evolutionary psychology to elucidate a common set of shared values We then show how these values can be used to address the alignment problem and conclude with problems and goals for future research The key audience for this book will be researchers in the field of ethics and artificial intelligence who are interested in or working on this problem These people will come from various professions and include philosophers computer programmers and psychologists as the problem itself is multi disciplinary

AI Aesthetics Jan-Noël Thon, Lukas R.A. Wilde, 2025-09-09 This volume investigates the intersection of generative AI and media aesthetics from an interdisciplinary perspective Combining in depth theoretical reflection with a diverse selection of case studies its authors explore the aesthetic forms of AI generated medial objects as well as the cultural imaginaries that the latter draw upon Bringing together a group of scholars from various geographic and disciplinary backgrounds the chapters move within and across different conceptualizations of AI aesthetics that can be located in between an aesthetics as artistics that is primarily concerned with aesthetic judgments related to skill and connoisseurship and an aesthetics as aisthetics that identifies all kinds of embodied perception as its object The book thus reflects on both the theoretical and the methodological implications of AI aesthetics while also demonstrating that this is still very much an emerging research field and that no dominant conceptualization of AI aesthetics has yet emerged Considering its decidedly international and interdisciplinary scope AI Aesthetics AI Generated Images between Artistics and Aisthetics will appeal to scholars and students within media studies cultural studies literary studies philosophy art history visual culture studies digital humanities and critical AI studies The Open Access version of this book available at <http://www.taylorfrancis.com> has been made available under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4.0 license
