Using Additional Information in Streaming Algorithms Raffael Buff, 2016-10-04 Streaming problems are algorithmic
 problems that are mainly characterized by their massive input streams Because of these data streams the algorithms for
 these problems are forced to be space efficient as the input stream length generally exceeds the available storage In this
 thesis the two streaming problems most frequent item and number of distinct items are studied in detail relating to their

algorithmic complexities and it is compared whether the verification of solution hypotheses has lower algorithmic complexity than computing a solution from the data stream For this analysis we introduce some concepts to prove space complexity lower bounds for an approximative setting and for hypothesis verification For the most frequent item problem which consists in identifying the item which has the highest occurrence within the data stream we can prove a linear space complexity lower bound for the deterministic and probabilistic setting This implies that in practice this streaming problem cannot be solved in a satisfactory way since every algorithm has to exceed any reasonable storage limit For some settings the upper and lower bounds are almost tight which implies that we have designed an almost optimal algorithm Even for small approximation ratios we can prove a linear lower bound but not for larger ones Nevertheless we are not able to design an algorithm that solves the most frequent item problem space efficiently for large approximation ratios Furthermore if we want to verify whether a hypothesis of the highest frequency count is true or not we get exactly the same space complexity lower bounds which leads to the conclusion that we are likely not able to profit from a stated hypothesis The number of distinct items problem counts all different elements of the input stream If we want to solve this problem exactly in a deterministic or probabilistic setting or approximately with a deterministic algorithm we require once again linear storage size which is tight to the upper bound However for the approximative and probabilistic setting we can enhance an already known space efficient algorithm such that it is usable for arbitrarily small approximation ratios and arbitrarily good success probabilities The hypothesis verification leads once again to the same lower bounds However there are some streaming problems that are able to profit from additional information such as hypotheses as e g the median problem

Press standards, privacy and libel

Great Britain: Parliament: House of Commons: Culture, Media and Sport Committee, 2010-02-24 The Committee's inquiry addresses concerns that the operation of libel laws and the impact of costs were stifling press freedom It also considers the balance between personal privacy and press freedom and the increasing use of injunctions and super injunctions It also examines press standards in the UK particularly considering Madeleine McCann's disappearance the suicides in and around Bridgend in 2008 and phone hacking and blagging The Committee does not consider that it would be right to legislate on privacy The Press Complaints Commission PCC should amend its Code to include a requirement that journalists notify the subject of their articles prior to publication subject to a public interest test The report also assesses the damage so called libel tourism has caused to the UK's reputation as a country which protects free speech and freedom of expression In cases where the UK is not the primary domicile or place of business of the claimant or defendant the claimant should face additional hurdles before being allowed to bring a case There is an urgent need to control defamation litigation costs more effectively Competitive and commercial factors led to an inexcusable lowering of press standards in the gathering and publishing of news about the McCann case and self regulation signally failed The PCC should be renamed the Press Complaints and Standards Commission reflecting its role as a regulator not just a complaints handling service The regulator

should have the power to fine its members where it believes that the departure from the Code of Practice is serious enough to warrant a financial penalty

Fiber Optics Weekly Update September 10, 2010 , *Correlation Clustering* Francesco Bonchi, David García-Soriano, Francesco Gullo, 2022-03-08 Given a set of objects and a pairwise similarity measure between them the goal of correlation clustering is to partition the objects in a set of clusters to maximize the similarity of the objects within the same cluster and minimize the similarity of the objects in different clusters In most of the variants of correlation clustering the number of clusters is not a given parameter instead the optimal number of clusters is automatically determined Correlation clustering is perhaps the most natural formulation of clustering as it just needs a definition of similarity its broad generality makes it applicable to a wide range of problems in different contexts and particularly makes it naturally suitable to clustering structured objects for which feature vectors can be difficult to obtain Despite its simplicity generality and wide applicability correlation clustering has so far received much more attention from an algorithmic theory perspective than from the data mining community The goal of this lecture is to show how correlation clustering can be a powerful addition to the toolkit of a data mining researcher and practitioner and to encourage further research in the area

Rowing News , 1999-08-07 *On Video Games* Soraya Murray, 2017-10-30 Today over half of all American households own a dedicated game console and gaming industry profits trump those of the film industry worldwide In this book Soraya Murray moves past the technical discussions of games and offers a fresh and incisive look at their cultural dimensions She critically explores blockbusters like The Last of Us Metal Gear Solid Spec Ops The Line Tomb Raider

and Assassin's Creed to show how they are deeply entangled with American ideological positions and contemporary political cultural and economic conflicts. As quintessential forms of visual material in the twenty-first century mainstream games both mirror and spur larger societal fears, hopes, and dreams and even address complex struggles for recognition. This book examines both their elaborately constructed characters and densely layered worlds whose social and environmental landscapes reflect ideas about gender, race, globalisation, and urban life. In this emerging field of study, Murray provides novel theoretical approaches to discussing games and playable media as culture. Demonstrating that games are at the frontline of power relations, she reimagines how we see them and more importantly how we understand them. *Official Congressional Directory* United States. Exploration of Visual Data Sean Xiang Zhou, Yong Rui, Thomas S. Huang, 2012-12-06. *Exploration of Visual Data* presents latest research efforts in the area of content-based exploration of image and video data. The main objective is to bridge the semantic gap between high-level concepts in the human mind and low-level features extractable by the machines. The two key issues emphasized are content awareness and user in the loop. The authors provide a comprehensive review on algorithms for visual feature extraction based on color, texture, shape, and structure and techniques for incorporating such information to aid browsing, exploration, search, and streaming of image and video data. They also discuss issues related to the mixed use of textual and low-level visual features to facilitate more effective access of multimedia data. *Exploration of Visual Data* provides state-of-the-art materials on the topics of content-based description of visual data, content-based low-bitrate video streaming, and latest asymmetric and nonlinear relevance feedback algorithms which to date are unpublished.
