Next-Generation FTTH Passive Optical Networks Josep Prat, 2008-07-16 Fibre to the Home networks constitute a fundamental telecom segment with the required potential to match the huge capacity of transport networks with the new user communication demands Huge investments in access network infrastructure are expected for the next decade with many initiatives already launched around the globe recently driven by the new broadband service demands and the necessity by operators to deploy a future proof infrastructure in the field Dense FTTH Passive Optical Networks PONs is a cost efficient way to build fibre access and international standards G E PON have been already launched leading to new set of telecom products for mass deployment However these systems only make use of less than 1% of the optical bandwidth thus relevant research is taking place to maximize the capacity of these systems with the latest opto electronic technologies demonstrating that the huge bandwidth available through the fibre access can be exploited in a cost efficient and reliable manner Next Generation FTTH Passive Optical Networks gathers and analyzes the most relevant techniques developed recently on technologies for the next generation FTTH networks trying to answer the question what s after G E PONs Next Generation Intelligent Optical Networks Stamatios Kartalopoulos, 2007-11-24 Optical networks have been in commercial deployment since the early 1980s as a result of advances in optical photonic and material technologies Although the initial deployment was based on silica ber with a single wavelength modulated at low data rates it was quickly demonstrated that ber can deliver much more bandwidth than any other transmission medium twisted pair wire coaxial cable or wireless Since then the optical network evolved to include more exciting technologies gratings optical lters optical multiplexers and optical ampli ers so that today a single ber can transport an unprecedented aggregate data rate that exceeds Tbps and this is not the upper limit yet Thus the ber optic network has been the network of choice and it is expected to remain so for many generationsto come for both synchronousand asynchronouspayloads voice data video interactive video games music text and more In the last few years we have also witnessed an increase in network attacks as a result of store andforwardcomputer basednodes These attackshave manymaliciousobjectives harvestsomeone else s data impersonate another user cause denial of service destroy les and more As a result a new eld in communicationis becomingimportant communicationnetworksand informationse rity In fact the network architect and system designer is currently challenged to include enhanced features such as intruder detection service restoration and countermeasures intruder avoidance and so on In all the next generation optical network is intelligent and able to detect and outsmart malicious intruders **Linear and Nonlinear**

Semiconductor Optical Amplifiers for Next-Generation Optical Networks René Bonk, 2014-05-12 In this book semiconductor optical amplifiers SOAs are studied with a view to linear and nonlinear applications in next generation optical networks Quantum dot SOAs can be optimized for linear amplification of signals with different modulation formats and multiplexing techniques Conversely bulk SOAs can be easily optimized for operation in the nonlinear regime However due to
