Teaching Science in Elementary and Middle School Joseph S. Krajcik, Charlene M. Czerniak, 2018-06-12 Teaching Science in Elementary and Middle School integrates principles of learning and motivation with practical teaching ideas for implementing them. Paralleling what scientists do, project based learning (PBL) represents the essence of inquiry and the nature of science and engages children and teachers in investigating meaningful real world questions about the world around them. This text provides concrete strategies on teaching using a project based approach and on meeting the principles in A Framework for K-12 Science Education and the Next Generation Science Standards (NGSS). Features include strategies for planning long term interdisciplinary student centered units, scenarios to help readers situate new experiences and a wealth of supplementary material on the Companion Website. Features in the Fifth Edition: Integrates research based findings from the National Research Council's Taking Science to School: A Framework for K-12 Science Education and NGSS to engage learners and help them make sense of phenomena in using disciplinary core ideas, science and engineering practices and crosscutting concepts. Gives attention to cultural diversity throughout the chapters with an added focus on working with English Language Learners. Describes how to develop and use assessments that require students to make use of their knowledge to solve problems or explain phenomena. Illustrates how to use PBL to make connections to Common Core Standards for Mathematics and English Language Arts. Provides examples of project based lessons and projects to illustrate how teachers can support children in engaging in scientific and engineering practices such as asking questions, designing investigations, constructing models and developing evidence based explanation.

Teaching STEM in the Secondary School Frank Banks, David Barlex, 2020-12-29 This book looks at the purpose and pedagogy of STEM teaching and explores the ways in which STEM subjects can interact in the curriculum to enhance student understanding, achievement and motivation. By reaching outside their own classroom, teachers can collaborate across STEM subjects to enrich learning and help students relate school science, technology and maths to the wider world. Packed with ideas and practical details for teachers of STEM subjects, the new revised edition of this book considers what the STEM subjects contribute separately to the curriculum and how they relate to each other in the wider education of secondary school students. Describes and evaluates different curriculum models for STEM, suggests ways in which a critical approach to the pedagogy of the classroom, laboratory and workshop can support and encourage all pupils to engage fully in STEM, addresses the practicalities of introducing, organising and sustaining STEM related activities in the secondary school, looks to ways schools can manage and sustain STEM approaches in the long term. This new revised edition is essential reading for trainee and practising teachers, those engaged in further professional development and all who wish to make the learning of science, technology, engineering and mathematics an interesting, motivating and exciting experience for their students.
