Making Open Development Inclusive Matthew L. Smith, Ruhiya Kristine Seward, 2020-08-25 Drawing on ten years of empirical work and research analyses of how open development has played out in practice. A decade ago a significant trend toward openness emerged in international development. Open development can describe initiatives as disparate as open government, open health data, open science, open education and open innovation. The theory was that open systems related to data science and innovation would enable more inclusive processes of human development. This volume, drawing on ten years of empirical work and research, analyzes how open development has played out in practice. Focusing on development practices in the Global South, the contributors explore the crucial questions of who is allowed to participate when an initiative is open and who benefits or not from them, finding that processes characterized as open can sometimes be exclusionary in their implementation. Examining a wide range of cases, they consider the governance of open development ecosystems and the implementation of a variety of applications including open educational resources.
