Groups of Galaxies in the Nearby Universe Ivo Saviane,Valentin D. Ivanov,Jordanka Borissova,2007-08-01 For every galaxy in the field or in clusters there are about three galaxies in groups The Milky Way itself resides in a group and groups can be found at high redshift The current generation of 10 m class telescopes and space facilities allows the observation of the members of nearby groups with exquisite detail and their properties can be correlated with the global properties of their host group Groups in the local Universe offer us the chance to study galaxies in environments characterized by strong interactions In the cosmological context groups trace large scale structures better than clusters and the evolution of groups and clusters appears to be related All these aspects of research on groups of galaxies are summarized in this book written by scientists working in various fields **Large Scale Structures of the Universe** International Astronomical Union.
