College Rankings Compare:

Practices of Comparing Angelika Eppler, Walter Erhart, Johannes Grave, 2020-06-22 Practices of comparing shape how we perceive, organize and change the world. Supposedly innocent practices of comparing play a decisive role in forming categories, boundaries and hierarchies, but they can also give an impetus to question and change such structures. Like almost no other human practice, comparing pervades all social, political, economic and cultural spheres. This volume outlines the program of a new research agenda that places comparative practices at the center of an interdisciplinary exploration. Its contributions combine case studies with overarching systematic considerations. They show what insights can be gained and which further questions arise when one makes a seemingly trivial practice, comparing, the subject of in-depth research.

University Rankings, Diversity, and the New Landscape of Higher Education, 2019-02-18 University rankings are a relatively new phenomenon in higher education. Although quite an established practice in the U.S., it is only within the last decade that attempts to analyse university performance have spread to the rest of the world and that we also have seen new global rankings appear, rankings attempting to measure university performance beyond national borders. No wonder that this trend is accompanied by a growing interest in studying rankings throughout the world. This book is written as part of the effort to better understand rankings and their effects on higher education. A serious approach towards university rankings implies that rankings should be analysed properly, including the methods used and the indicators chosen, and investigate the objectives claimed. If university rankings are considered as consumer information, then everyone should have an interest in basing such guidance on valid and reliable data and methodology. A serious analysis should also discuss the wider implications of rankings as an emerging phenomenon in higher education. Consequently, the contributions to this book investigate and analyse how different rankings work, how they reach their conclusions, and on what data and methodology they are built. Furthermore, it provides a critical reflection about the impact of rankings on higher education, how and in what way rankings influence policy making, the structure of the sector or the internal life of the sector. **The Force of**

Comparison Willibald Steinmetz, 2019-09-01 In an era defined by daily polls, institutional rankings and other forms of social quantification, it can be easy to forget that comparison has a long historical lineage. Presenting a range of multidisciplinary perspectives, this volume investigates the concepts and practices of comparison from the early modern period to the present. Each chapter demonstrates how comparison has helped to drive the seemingly irresistible dynamism of the modern world, exploring how comparatively minded assessors determine their units of analysis, the criteria they select or ignore, and just who it is that makes use of these comparisons and to what ends.
