Natural history museums are changing both because of their own internal development and in response to changes in context. Historically the aim of collecting from nature was to develop encyclopedic assemblages to satisfy human curiosity and build a basis for taxonomic information. Today with global biodiversity in rapid decline there are new reasons to build and maintain collections while audiences are more diverse, numerous and technically savvy. Institutions must learn to embrace new technology while retaining the authenticity of their stories and the value placed on their objects. *The Future of Natural History Museums* begins to develop a cohesive discourse that balances the disparate issues that our institutions will face over the next decades. It disassembles the topic into various key elements and through commentary and synthesis explores a cohesive picture of the trajectory of the natural history museum sector. This book contributes to the study of collections, teaching and learning, ethics and running non-profit businesses and will be of interest to museum and heritage professionals and academics and senior students in Biological Sciences and Museum Studies.

Photography, Natural History and the Nineteenth-Century Museum Kathleen Davidson, 2017-12-02

The Victorian era heralded an age of transformation in which momentous changes in the field of natural history coincided with the rise of new visual technologies. Concurrently different parts of the British Empire began to more actively claim their right to being acknowledged as indispensable contributors to knowledge and the progress of empire. This book addresses the complex relationship between natural history and photography from the 1850s to the 1880s in Britain and its colonies: Australia, New Zealand and to a lesser extent India. Coinciding with the rise of the modern museum, photography's arrival was timely and it rapidly became an essential technology for recording and publicising rare objects and valuable collections. Also during this period the medium assumed a more significant role in the professional practices and reputations of naturalists than has been previously recognized and it figured increasingly within the expanding specialized networks that were central to the production and dissemination of new knowledge. In an interrogation that ranges from the first forays into museum photography and early attempts to document collecting expeditions to the importance of traditional and photographic portraiture for the recognition of scientific discoveries, this book not only recasts the parameters of what we actually identify as natural history photography in the Victorian era but also how we understand the very structure of
