

5. Pass the inner cable through the 1/8-5/16" outer casing through the end with the plastic cap.

#### ■ Cassette joint side

6. After checking that the end of the outer casing is sitting securely in the cable adjustment bolt of the Revs-shift lever, attach the inner cable fixing bolt unit to the inner cable.

7. Bring the cable around to the cassette joint pulley, hold so that the inner cable fixing nut is facing to the outside (toward the fork end), and then slide the flat part of the inner cable fixing washer into the gap in the pulley.

8. Turn the cable 60° counterclockwise and attach it to the hook.

9. Attach the inner cable to the pulley as shown in the illustration, pass the inner cable through the slit in the cassette joint bracket, and then insert the end of the outer casing securely into the outer casing holder.

If it is easier to insert the outer casing into the outer casing holder first, do so. Then insert a 2mm Allen key or a #14 spoke into the hole in the cassette joint pulley and turn the pulley so that the inner cable fixing bolt unit fits into the gap in the pulley.

Note: Check that the inner cable is correctly seated inside the pulley guide.

10. Secure the cable to the frame with the outer casing bands.

## Adjusting the cassette joint

1. Set the Revs-shift lever to II. Check to be sure that the yellow setting lines on the cassette joint bracket and pulley are aligned at this time.

The yellow setting lines on the cassette joint are located in two places. Use the one that is easiest to see.

If the yellow setting lines are not aligned, turn the cable adjustment bolt of the shifting lever to align the setting lines. After this, move the shifting lever once more from II to I and then back to II, and then re-check to be sure that the yellow setting lines are aligned.

2. After adjusting the cassette joint, cut off the excess length of inner cable and then install the inner end cap.

## General Safety Information

### ⚠ CAUTION

To avoid serious injuries: Be sure to shift the lever one gear at a time, and reduce the force being applied to the pedals during shifting. If you try to force operation of the shifting lever while the pedals are being turned strongly, your feet may come off the pedals and the bicycle may topple over, which could result in serious injury.

### NOTE:

- For maximum performance we highly recommend Shimano lubricants and maintenance products.
- Parts are not guaranteed against natural wear or deterioration resulting from normal use.

takes a data first approach to framing the built environment sector's unique challenges and how industry can address them through better use of data. It describes how the sector has failed to derive value from data and the common causes underlying this failure. It then provides practical guidance on how to use data to construct and operate built environment assets in a manner that better meets society's needs. The book examines how industry norms, organizational culture and our personal behaviours contribute to the successful use of data. It sets out a philosophy and vision for the use of data in the built environment and how this in turn might help the sector realise better outcomes in terms of cost, schedule, quality and sustainability. Data is a valuable asset, one that the built environment sector must generate, protect, manage and exploit. The book works as a holistic primer to data and the built environment, written both for those who are new to data or the built environment and including deep dive material that will provide insight to experienced professionals.
