TO Geraldine Wilson, Faze

Re: AI engineer role

Dear Ms. Wilson,

Having heard about the AI engineer role from your CEO Harry Lambert, I feel that my mix of academic and industry expertise would be ideal for your stage of development.

After my Ph.D. in Artificial Intelligence from Oxford University, I embarked on a rewarding journey with the CellTech startup, where I led and contributed to AI-driven initiatives that drove spectacular outcomes. My contributions there included:

- Architecting a predictive analytics model that increased product recommendation accuracy by 342%, directly influencing a 25% growth in quarterly sales.
- Pioneering the implementation of a neural network-based solution for natural language processing, streamlining our customer support chatbot's efficiency, and reducing human intervention by 80%.
- Collaborating with a cross-disciplinary team to develop an AI-driven anomaly detection system for our infrastructure, resulting in a 20% decrease in downtime.

My proficiency encompasses a wide range of tools and platforms, such as TensorFlow and Keras, as well as expertise in deploying models at scale. I've also played an active role in transitioning traditional software systems to AI-enhanced systems, ensuring not only better performance but also scalability.

I have authored research papers that have been featured in AI conferences like NeurIPS and ICML, reflecting my commitment to both the practical and theoretical dimensions of the field. My recent paper on "Distributed Deep Learning Optimization Techniques" emphasizes my commitment to both the applied and research aspects of AI.

Your reputation for harnessing AI to create disruptive solutions and redefine industry standards precedes you. I would be honored to explore any potential opportunities during an interview.

Sincerely,

Cara Powell

Technology for Good Jim Fruchterman, 2025-09-02 A visionary guide to using technology for positive social change from a MacArthur genius awardee former rocket engineer and passionate leader in the social enterprise movement The accepted wisdom in big business is that the only worthy ideas are ones that make a lot of money preferably billions But

Jim Fruchterman believes there is a different path for technology. What if tech returned to its roots and made people more effective and powerful? What if the benefits of technology came to the 90 percent of humanity traditionally neglected by for-profit companies in favor of immense profits gained by focusing on the richest 10 percent? In *Technology for Good*, Fruchterman explores that question and delivers a comprehensive how-to for leaders who want to create, expand, join, support, and improve organizations that see building technology as a key element of delivering on their social good mission. The author makes a strong case that tech is required for social change at scale. He then offers guidance on how to structure, fund, staff, manage, scale, and sustain nonprofits that leverage technology for social good. The book includes actionable, proven practices, compelling case studies of nonprofits that have cracked the code on tech for good, and Fruchterman's own stories of what he has learned as a tech-for-good entrepreneur. With 80 percent of the examples in the book from organizations and individuals outside the US, *Technology for Good* is a call to action with a genuinely global focus, blazing a path toward a future in which human beings come rightly and justly before profits.

Embracing Chatbots in Higher Education Alexander M. Sidorkin, 2024-03-28. This book explores the integration of AI-powered chatbots such as ChatGPT into higher education for instructional and communication purposes. The author emphasizes the responsibility of higher education institutions to equip students with advanced skills for writing with AI assistance and prepare them for an increasingly AI-driven world. Offering numerous practical tips, the book demonstrates how universities can increase student success and stem the rising cost of higher education by employing AI tools. The chapters discuss streamlining tasks such as grading, providing feedback, and handling administrative duties to show how educators can be enabled to focus on more meaningful aspects of their work. The author also reflects on the philosophical and ethical considerations and potential pitfalls of relying on AI in higher education, including concerns about academic integrity and the importance of human input in the learning process. The author offers a responsible and informed approach to incorporating the new, powerful tools into the academic landscape. This volume will be a key resource for higher education faculty and administrators seeking to navigate the complex intersection of AI and writing.
