Community Science in Ecology Yukari Suzuki-Ohno, 2024-06-24 This book introduces community science or citizen science projects in Japan with a focus on ecology. Environments and ecosystems that have been slowly built up over time are changing and collapsing dramatically. In this rapidly changing environment, ecologists need to collaborate with volunteers in their research and activities to investigate and conserve a vast area. This book aims to guide ecologists in the practice of community science. The authors, who are leading ecologists and practitioners of community science projects, share their methods and lessons learned from practice. The book begins with the definition of community science, and the following chapters introduce monitoring in ecological community science using various methods such as observation, specimens, photographs, videos, sounds, and environmental DNA. Readers can learn about the advantages and disadvantages of these methods in ecological community science monitoring. The book also covers topics such as scientific communication, data obtained from ecological community science monitoring, the rights of participants, decision making in community science, and conservation activities with volunteers such as invasive alien species extermination and nature restoration. This book serves as a valuable resource for readers interested in ecological community science and its practice. The book is suitable for both undergraduate students and researchers as well as practitioners.

Technology in China: A Roadmap to 2050 Huadong Guo, Ji Wu, 2010-08-09 As one of the eighteen field specific reports comprising the comprehensive scope of the strategic general report of the Chinese Academy of Sciences, this sub report addresses long range planning for developing science and technology in the field of space science. They each craft a roadmap for their sphere of development to 2050. In their entirety, the general and sub group reports analyze the evolution and laws governing the development of science and technology, describe the decisive impact of science and technology on the modernization process, predict that the world is on the eve of an impending S T revolution, and call for China to be fully prepared for this new round of S T advancement. Based on the detailed study of the demands on S T innovation in China's modernization, the reports draw a framework for eight basic and strategic systems of socio economic development with the support of science and technology, work out China's S T roadmaps for the relevant eight basic and strategic systems in line with China's reality, further detail S T initiatives of strategic importance to China's modernization, and provide S T decision makers with comprehensive consultations for the development of S T innovation consistent with China's reality. Supported by illustrations and tables of data, the reports provide researchers, government officials, and entrepreneurs with guidance concerning research directions, the planning process, and investment. Founded in 1949, the Chinese Academy of Sciences is

the nation's highest academic institution in natural sciences. Its major responsibilities are to conduct research in basic and technological sciences; to undertake nationwide integrated surveys on natural resources and ecological environment; to provide the country with scientific data and consultations for government's decision making; to undertake government assigned projects with regard to key S/T problems in the process of socio-economic development; to initiate personnel training; and to promote China's high-tech enterprises through its active engagement in these areas.

Big Science, Innovation, and Societal Contributions Shantha Liyanage, Markus Nordberg, Marilena Streit-Bianchi, 2024. Big Science Innovation and Societal Contributions offers a connection between Big Science and its societal impacts from a multidisciplinary perspective drawing on physics and astrophysics scholars to explain the reasoning behind their work and how such knowledge can be applied to everyday life. Through simplifying complex scientific concepts, Big Science Innovation and Societal Contributions explains the evolution of Big Science experiments and what it takes to manage and maintain complex scientific experiments with a human-centred approach. Further, it examines the motivations behind international efforts to develop capital-intensive and human-resource-rich large-scale multi-national scientific investments to solve fundamental research problems concerning our future. Drawing on reliable scientific evidence, multi-disciplinary perspectives, and personal insights from collider physics detectors, accelerator and telescopes research, the volume outlines the mechanisms, benefits, and methodologies, as well as the potential challenges and shortcomings of Big Science, to learn and reflect on for future initiatives. This is an open access title available under the terms of a CC BY-NC-ND 4.0 International licence. It is free to read at Oxford Scholarship Online and offered as a free PDF download from OUP and selected open access locations.
