Transforming Banking Infrastructure Services with Artificial Intelligence, Machine Learning, and Agentic AI: Modernizing Financial Systems in the Age of Automation Bharath Somu, Cost Sharing, Capacity Investment and Pricing in Networks Anja Schedel, 2021-06-28 Anja Schedel analyzes two models in the field of algorithmic game theory which both constitute bilevel problems in networks The first model is a game theoretic variant of the well known Steiner forest problem and one is interested in an optimal sharing of the cost of the Steiner forest The author provides and partially exactly characterizes network structures which allow for cost minimal pure Nash equilibria The second model is motivated from privatized public roads in which private selfishly acting firms build roads and as compensation for their investment are allowed to set prices for using the roads For a basic model of this situation the author shows existence and uniqueness of pure Nash equilibria The existence result requires a non standard proof approach since techniques like Kakutani's fixed point theorem cannot be applied directly
