Insights in Nutrition and Metabolism Ellen E. Blaak, 2023-06-23 **A Common Sense Guide To Weight Loss**, *Cytobiology of Human Prostate Cancer Cells and Its Clinical Applications* Kenichiro Ishii, 2020-06-25 The number of males diagnosed with prostate cancer PCa is increasing all over the world Most patients with early stage PCa can be treated with appropriate therapy such as radical prostatectomy or irradiation On the other hand androgen deprivation therapy ADT is the standard systemic therapy given to patients with advanced PCa ADT induces temporary remission but the majority of patients approximately 60% eventually progress to castration resistant prostate cancer CRPC which is associated with a high mortality rate Generally well differentiated PCa cells are androgen dependent i.e. androgen receptor AR signalling regulates cell cycle and differentiation The loss of AR signalling after ADT triggers androgen independent outgrowth generating poorly differentiated uncontrollable PCa cells Once PCa cells lose their sensitivity to ADT effective therapies are limited In the last few years however several new options for the treatment of CRPC have been approved e.g. the CYP17 inhibitor the AR antagonist and the taxane Despite this progress in the development of new drugs there is a high medical need for optimizing the sequence and combination of approved drugs Thus the identification of predictive biomarkers may help in the context of personalized medicine to guide treatment decisions improve clinical outcomes and prevent unnecessary side effects In this Special Issue Book we focused on the cytobiology of human PCa cells and its clinical applications to develop a major step towards personalized medicine matched to the individual needs of patients with early stage and advanced PCa and CRPC We hope that this Special Issue Book attracts the attention of readers with expertise and interest in the cytobiology of PCa cells

Sodium Arsenite Studies in P53+/-MICE Glenda Moser, Thomas Lester Goldsworthy, Raymond R. Tice, 2000 *Wheat and Rice in Disease Prevention and Health* Ronald Ross Watson, Victor R. Preedy, Sherma Zibadi, 2014-01-22 Wheat and Rice in Disease Prevention and Health reviews the wide range of studies focusing on the health benefits and disease prevention associated with the consumption of wheat and rice the two most widely consumed whole grains This book provides researchers clinicians and students with a comprehensive definitive and up to date compendium on the diverse basic and translational aspects of whole grain consumption and its protective effects across human health and disease It serves as both a resource for current researchers as well as a guide to assist those in related disciplines to enter the realm of whole grain and nutrition research Overall studies have shown that a decrease in the amount of whole grains in the modern diet is

related to a corresponding increase in health problems that are attributed to this all too common dietary imbalance. The resulting health issues associated with an over processed diet which provides inadequate levels of nutrients from whole grains may include obesity, diabetes, high blood lipids, chronic inflammatory states and an excess of oxidative stress. Strength and endurance may also suffer as a result of these nutrient deficiencies followed by declines in energy and immunity. Saves researchers and clinicians time in quickly accessing the latest details on a broad range of nutritional and epidemiological issues. Provides a common language for nutritionists, nutrition researchers, epidemiologists and dietitians to discuss how the action of wheat and rice protect against disease and modify human health. Preclinical, clinical and population studies help nutritionists, dietitians and clinicians map out key areas for research and further clinical recommendations.

Nutrition in Inflammatory Bowel Disease (IBD) Maitreyi Raman, 2019-09-02. The purpose of this Special Issue, *Nutrition in Inflammatory Bowel Disease*, is to increase knowledge regarding the role of dietary composition and effects in IBD, describing the prevalence of malnutrition in IBD and the effect on clinical outcomes, discussing methods of nutrition risk screening and assessment in IBD and reviewing mechanisms through which diet and dietary components may affect disease severity. The articles focus on the following areas: Dietary Composition Therapy Interventions in Ulcerative Colitis and effects on outcomes; Dietary Composition Therapy Interventions in Crohn's Disease and effects on outcomes; Nutrition Risk Screening and Assessment in IBD; Mechanisms of Diet in the pathogenesis of IBD.

Nutrition and Growth Berthold, Koletzko, Dominique, Turck, Raanan, Shamir, Moshe, Phillip, 2020-01-28. Children's growth is a common concern to all health care providers treating neonates, infants, toddlers, children and adolescents. Defining the best nutrition for healthy and active children as well as for those who suffer from acute or chronic disease is relevant to the children, their caregivers and to health care providers. For this publication, an international group of experts in nutrition, metabolism, gastroenterology, endocrinology and auxology have selected some of the most important manuscripts published between July 2018 and June 2019. Each paper is supplemented with editorial comments aiming to highlight the lessons that can be learnt. This book provides a significant contribution to the knowledge base and will help all subspecialties of health care providers dealing with the pediatric age group to get updated on some of the key issues in the interaction between nutrition and growth.

Transplantation, Bioengineering, and Regeneration of the Endocrine Pancreas Giuseppe Orlando, Lorenzo Piemonti, Camillo Ricordi, Robert J. Stratta, Rainer W.G. Gruessner, 2019-11-10. *Transplantation, Bioengineering and Regeneration of the Endocrine Pancreas*, Volume 2, sets a new standard in transplant and regenerative medicine. The book details the state of the art in modern islet auto transplantation, also discussing current progress in regenerative medicine research in diabetes medicine. Regenerative medicine is changing the premise of solid organ transplantation; hence, this volume catalogs technologies being developed.

and methods being implemented Bioengineering and regenerating beta cells clinical pancreas and islet transplantation tissue engineering biomaterial sciences stem cell biology and developmental biology are all addressed and applied directly to diabetes medicine Provides comprehensive and cutting edge knowledge of whole pancreas and islet transplantation Addresses imaging treatment scaffold technology the use of stem cells to generate insulin 3D printing and more Offers an update on the progress of regenerative medicine research aimed at beta cell replacement for the treatment of diabetes
