I. Nwogugu,2017-06-09 This book explores why Modified Internal Rate of Return MIRR and Net Present Value NPV are not necessarily accurate or efficient tools for valuation and decision making The author specifically addresses the biases and framing effects inherent in the NPV MIRR IRR model and in related approaches such as Adjusted Present Value APV Net Future Value NFV and by extension Polynomials In doing so the book presents new ways of solving higher order polynomials using invariants and homomorphisms and explains why the Fundamental Theorem of Algebra the Binomial Theorem and the Descartes Sign Rule are unreliable Chapters also discuss how International Asset Pricing Theory IAPT and Intertemporal Capital Asset Pricing Models ICAPM can produce inaccurate results in certain circumstances The conditions under which ICAPM and IAPT may be accurate are described as well as why those conditions cannot or are unlikely to exist The conditions under which negative interest rates may exist or are justified are also outlined Moreover the author explains why traditional Consumption Savings Investment Production models of allocation can be inefficient and then introduces a new model of allocation that can be applied to individuals households and companies Finally the book explains why the Elasticity of Intertemporal Substitution is a flawed concept and introduces the Marginal Rate of Intertemporal Joint Substitution as a solution **Science Activities** ,1999 **Thought Experiments** Roy A.
