songs television shows and movies are being produced than ever before Nor does this mean a tidal wave of derivative poorly produced kitsch analyzing decades of production and sales data as well as bestseller and best of lists Waldfoegel finds that the new digital model is just as successful at producing high quality successful work as the old industry model and in many cases more so The vaunted gatekeeper role of the creative industries proves to have been largely mythical The high costs of production have stifled creativity in industries that require ever bigger blockbusters to cover the losses on ever more expensive failures Are we drowning in a tide of cultural silt or living in a golden age for culture The answers in Digital Renaissance may surprise you

Broken Scars J.M. Walker,2019-06-29 Ruined Tortured Broken What could have been the perfect childhood turned into a hell that the devil himself would shy away from I was forced to deal with an evil that would make the darkest of souls cringe Lily Noel was scarred but beautiful She was perfectly flawed and everything that I needed Attraction bordered on obsession Passion bordered on ecstasy Addiction bordered on insanity Nothing could get in the way of our love Nothing Bridging Local Constraints and Global Priorities Nancy Brett,2024-04-16 Biogas offers a sustainable alternative to fossil fuels promoting circularity and local economic growth It is therefore increasingly prioritised by decision makers within Sweden and the EU Despite its advantages the Swedish market is perceived as underachieving in terms of scale and penetration Biogas a socio technical system has necessitated state and regional support for its establishment and expansion given its competition with entrenched fossil fuels and its inherent material limitations This thesis primarily seeks to explore how the interplay of political societal and market perspectives has influenced the biogas market The research zeroes in on the Swedish biogas market with a special focus on the impact of geographical regions on market shaping Using in part a longitudinal case study revealed that historically successful regions have relied heavily on translations of missions and visions for developing the biogas markets These translations were found to build heavily on local concerns and local resources The consequence of this meant that the global context of the climate problem was not always the focus of policy and strategies The significance of local interpretation was further unveiled as a component of value creation where value is closely tied to the material and social conditions of local geographies Value creation for intricate systems like biogas which are multifunctional and span various social domains indicates that biogas and biofertilisers are entities that are both naturally and socially constructed underlining the impossibility of separating the natural from the social The socio material properties were important for biogas market shaping as shown by tracing both biogas and biofertilisers The connections between methane and fossil gas were found to be positive and negative for the biogas market The reliance on fossil gas has created conditions that allow the biogas market to expand However the narrative of fossil gas as a bridge has at times led to doubts about biogas and there is a risk that instead of biogas greening fossil gas fossil gas has a browning effect on the biogas market For biofertiliser the socio material was found to be in a phase of change It was found that the biogas market

has been built for the energy market but increasingly it is important to consider the role of biofertiliser in this market What was previously considered to be a by product and a problem for the producers is increasingly seen as an asset Similar to the findings of the connection between fossil gas and biomethane this is a change in social framings more than a change in the material The movement from waste to by product to an asset can be an important view both empirically and theoretically to foreground that for an object to be understood as valuable or sustainable work is needed This highlighted that markets do not simply appear and objects are not inherently valuable or sustainable It is instead an interplay between the social material and technical which re shapes products and their markets Lastly this thesis through the lens of marketisation traced the concerns of the bio gas market It found that the biogas market is still evolving often referred to as a hot market The boundaries of the market including what is considered an externality are still being defined While this doesn't fully account for the slow growth it does enable stakeholders to use this understanding to influence the market's development As the biogas market changes along with other factors such as the role of fossil gas the impact of material changes with liquified biogas and the growth of the concentrated biofertiliser market it's evident that the narratives will shift This thesis adds to the empirical literature on renewable energy by emphasising that regions that depend on creating value for their citizens by promoting a local narrative will need to adapt to reflect the new material realities This will influence both how valuation processes are conducted and the use of missions and visions by both the public and private sectors Biogas is a highly relevant alternative to fossil fuels and can also contribute to the circular economy and local economic development Different regions have prioritised biogas as a decision-maker in Sweden and EU In Sweden biogas is still considered a underperforming market due to its size and risk Biogas is a socio-technical system that has grown from national and local regions for it to be established on the ground due to competition from fossil fuels but also due to material restrictions The primary purpose of this dissertation is to investigate how the interplay between different political, social and market structures has shaped the biogas market The study focuses on the biogas market in Sweden with a special emphasis on the role of different geographical regions A longitudinal case study has been conducted to observe the central role of interpretations of policy and vision in the process of motivating local actors to develop biogas markets in selected regions Local policy interpretations have shown how the degree of building on local problems and resources can influence this process This also indicates that climate problems in a global context are not always in focus The local policy interpretation has also shown that it is part of the development process that biogas and biogas-related objects are both naturally and socially constructed The analysis has also shown that it is important to distinguish between the natural and the social in complex systems as they can have different social functions The socio-material properties of biogas and biogas-related objects are important for the development of the biogas market A clear example is the relationship between biogas and fossil gas which has shown both strengths and weaknesses for the development of the biogas market It is concluded that biogas can be used
