How to Think about Data Science Diego Miranda-Saavedra,2022-12-23 This book is a timely and critical introduction for those interested in what data science is and isn't and how it should be applied The language is conversational and the content is accessible for readers without a quantitative or computational background but at the same time it is also a practical overview of the field for the more technical readers The overarching goal is to demystify the field and teach the reader how to develop an analytical mindset instead of following recipes The book takes the scientist's approach of focusing on asking the right question at every step as this is the single most important factor contributing to the success of a data science project Upon finishing this book the reader should be asking more questions than I have answered This book is therefore a practising scientist's approach to explaining data science through questions and examples *Reality Simulation in Science Fiction Literature, Film and Television* Heather Duerre Humann,2019-08-27 In recent decades science fiction in both print and visual media has produced an outpouring of story lines that feature forms of simulated reality These depictions appear with such frequency that fictional portrayals of simulated worlds have become a popular sci-fi trope one that prompts timeless questions about the nature of reality while also tapping into contemporary debates about emerging technologies In combination with tech-driven tensions this study shows that our collective sense of living in politically uncertain times also propels the popularity of these story lines Because of the kinds of questions they raise and the cultural anxieties they provoke these fictional representations provide a window into contemporary culture and demonstrate how we are reassessing our own reality *Optimization and Decision Science: Methodologies and Applications* Antonio Sforza,Claudio Sterle,2017-11-03 This proceedings volume highlights the state of the art knowledge related to optimization decisions science and problem solving methods as well as their application in industrial and territorial systems It includes contributions tackling these themes using models and methods based on continuous and discrete optimization network optimization simulation and system dynamics heuristics metaheuristics artificial intelligence analytics and also multiple criteria decision making The number and the increasing size of the problems arising in real life require mathematical models and solution methods adequate to their complexity There has also been increasing research interest in Big Data and related challenges These

challenges can be recognized in many fields and systems which have a significant impact on our way of living design management and control of industrial production of goods and services transportation planning and traffic management in urban and regional areas energy production and exploitation natural resources and environment protection homeland security and critical infrastructure protection development of advanced information and communication technologies The chapters in this book examine how to deal with new and emerging practical problems arising in these different fields through the presented methodologies and their applications The chapter topics are applicable for researchers and practitioners working in these areas but also for the operations research community The contributions were presented during the international conference Optimization and Decision Science ODS2017 held at Hilton Sorrento Palace Conference Center Sorrento Italy September 4 7 2017 ODS 2017 was organized by AIRO Italian Operations Research Society in cooperation with DIETI Department of Electrical Engineering and Information Technology of University Federico II of Naples
