establish that the effective marginal investors in the Treasury bill market are households as opposed to tax exempt institutions or corporations We find no evidence of corporate tax rate effects on Treasury bill yields The study is then extended to an examination of the tax exempt market The results there contradict the hypothesis that commercial bank arbitrage generally ensures that the taxable tax exempt interest rate spread is determined by the corporate tax rate Our estimates decisively reject the corporate in favor of the personal income tax rate as being the relevant tax rate of the marginal investor in this market as well
