Meaningful Stuff Jonathan Chapman,2021-08-03 An argument for a design philosophy of better not more. Never have we wanted, owned, and wasted so much stuff. Our consumptive path through modern life leaves a wake of social and ecological destruction: sneakers worn only once, bicycles barely even ridden, and forgotten smartphones languishing in drawers. By what perverse alchemy do our newest, coolest things so readily transform into meaningless junk? In *Meaningful Stuff*, Jonathan Chapman investigates why we throw away things that still work and shows how we can design products, services, and systems that last. Obsolescence is an economically driven design decision: a plan to hasten a product's functional or psychological undesirability. Many electronic devices, for example, are intentionally impossible to dismantle for repair or recycling; their brief use career proceeding inexorably to a landfill. A sustainable design specialist who serves as a consultant to global businesses and governmental organizations, Chapman calls for the decoupling of economic activity from mindless material consumption and shows how to do it. Chapman shares his vision for an experience-heavy, material-light design sensibility. This vital and timely new design philosophy reveals how meaning emerges from designed encounters between people and things, explores ways to increase the quality and longevity of our relationships with objects and the systems behind them, and ultimately demonstrates why design can and must lead the transition to a sustainable future.

Capitalism, Power and Innovation Cecilia Rikap, 2021-03-29 In contemporary global capitalism the most powerful corporations are innovation or intellectual monopolies The book's unique perspective focuses on how private ownership and control of knowledge and data have become a major source of rent and power The author explains how at the one pole these corporations concentrate income property and power in the United States China and in a handful of intellectual monopolies particularly from digital and pharmaceutical industries while at the other pole developing countries are left further behind The book includes detailed empirical mappings of how intellectual monopolies develop and transform knowledge from universities and open source collaborations into intangible assets The result is a strategy that combines undermining the commons through privatization with harvesting from the same commons The book ends with provoking reflections to tilt the scale against intellectual monopoly capitalism and arguing that desired changes require democratic

mobilization of workers and citizens at large This book represents one of the first attempts to capture the contours of an emerging new era where old perspectives lead us astray and the old policy toolbox is hopelessly inadequate This is true for the idea that the best or only way to promote innovation is to transform knowledge into private property It is also true for anti trust policies focusing exclusively on consumer prices The formation of global infrastructures that lead to natural monopolies calls for public rather than private ownership Scholars and professionals from the social sciences and humanities in particular economics sociology political science geography educational science and science and technology studies will enjoy a clear and all embracing depiction of innovation dynamics in contemporary capitalism with a particular focus on asymmetries between actors regions and topics In fact its topical issue broadens the book s scope to those curious about how innovation networks shape our world

School Libraries in a Time of Change Kathleen W. Craver,2019-08-01 By becoming practical futurists school librarians can help their libraries not only to survive sweeping changes in education but to thrive This book shows how to

spot technological trends and use them to your library's advantage. During this time of rapid modernization of technology and educational reform, this book is a must read for school librarians tasked with ensuring their libraries meet evolving standards. This title provides the research and organizational techniques and skills they need to gain seats at the table of the three power committees: technology, curricula, and strategic planning. School librarians need to collect and publicize national and local school-based evidence that shows the positive correlations between school librarians and student achievement. Craver notes correlative sources and provides ideas to employ them to ensure that school librarians remain indispensable. In addition, acquiring technological skills and becoming expert at their application are paramount for librarians. Even more important is the need for librarians to assume sole responsibility for designing and integrating information literacy and critical thinking skills throughout the curriculum. Craver analyzes studies that show students' inability to discern fact from fiction, ads from news, and information bias in electronic information sources and recommends six actions that school librarians take to ensure that they become active participants in their future rather than its victims.
