Readings in Music and Artificial Intelligence Eduardo Reck Miranda, 2013-10-28 The interplay between emotional and intellectual elements feature heavily in the research of a variety of scientific fields including neuroscience the cognitive sciences and artificial intelligence AI This collection of key introductory texts by top researchers worldwide is the first study which introduces the subject of artificial intelligence and music to beginners Eduardo Reck Miranda received a Ph D in music and artificial intelligence from the University of Edinburgh Scotland He has published several research papers in major international journals and his compositions have been performed worldwide Also includes 57 musical examples *Advances in Artificial Intelligence* Cyril Goutte, Xiaodan Zhu, 2020-05-05 This book constitutes the refereed proceedings of the 33rd Canadian Conference on Artificial Intelligence Canadian AI 2020 which was planned to take place in Ottawa ON Canada Due to the COVID 19 pandemic however it was held virtually during May 13 15 2020 The 31 regular papers and 24 short papers presented together with 4 Graduate Student Symposium papers were carefully reviewed and selected from a total of 175 submissions The selected papers cover a wide range of topics including machine learning pattern recognition natural language processing knowledge representation cognitive aspects of AI ethics of AI and other important aspects of AI research *Sequential Decision-Making in Musical Intelligence* Elad Liebman, 2019-10-01 Over the past 60 years artificial intelligence has grown from an academic field of research to a ubiquitous array of tools used in everyday technology Despite its many recent successes certain meaningful facets of computational intelligence have yet to be thoroughly explored such as a wide array of complex mental tasks that humans carry out easily yet are difficult for computers to mimic A prime example of a domain in which human intelligence thrives but machine understanding is still fairly limited is music Over recent decades many researchers have used computational tools to perform tasks like genre identification music summarization music database querying and melodic segmentation While these are all useful algorithmic solutions we are still a long way from constructing complete music agents able to mimic at least partially the complexity with which humans approach music One key aspect that hasn't been sufficiently studied is that of sequential decision making in musical intelligence Addressing this gap the book focuses on two aspects of musical intelligence music recommendation and multi agent interaction in the context of music Though motivated primarily by music related tasks and focusing largely on people's musical preferences the work presented in this book also establishes that insights from music specific case studies can also be applicable in other concrete social domains such as content recommendation Showing the generality of insights from musical data in other contexts provides evidence for the utility of music domains as testbeds for the development of general artificial intelligence techniques Ultimately this thesis demonstrates the overall value of taking a sequential decision making approach in settings previously unexplored from this perspective Advanced Intelligent Computing Theories and Applications. Wiggins, 2013-03-09 The research fields of artificial intelligence and music and cognitive musicology are relative newcomers to the many interdisciplinary groupings based around the centre of AI and cognitive science They are concerned with the computational study and emulation of human behaviour with respect to music in many aspects and with varying degrees of emphasis on psychological plausibility Recent publications have included work in such diverse areas as rhythm and pitch perception performance composition and formal analysis Music shares with language the property of giving access to human mental behaviour in a very direct way As such it has the potential to be a very useful domain for AI work Furthermore in the course of time AI related work will surely throw light back onto some or all of the fields to which it is applied Indeed we are already beginning to feel the benefits of the application of AI techniques to music technology It is not surprising therefore that one of the first areas interest for of musical AI study is that of music education There are many ways in which an artificial intelligence or cognitive science approach to music education may be applied for example to automate tuition to explain learning processes to provide metaphors for human computer interaction and so on This collection of papers which is intended to give an impression of both the breadth and depth of the field originated from a workshop entitled Music Education An Artificial Intelligence Approach     *Artificial Intelligence and Robotics* Huimin Lu, 2020-11-10 This book provides insights into research in the field of artificial intelligence in combination with robotics technologies The integration of artificial intelligence and robotic technologies is a highly topical area for researchers and developers from academia and industry around the globe and it is likely that artificial intelligence will
