Top Movies Compare Returns:

Predicting Movie Success at the Box Office Barrie Gunter, 2018-02-20 This book explores the different factors that can influence a new movie's prospects at the box office. Looking at factors such as the production budget, distribution model, genre, stars, and audience reactions of films, Gunter asks how such aspects may reduce the uncertainties of success so common in the movie industry. The reader is taken on a journey through filmmaking factors that research suggests impact box office performance. While box office revenues represent only part of a movie's earning potential, Gunter highlights how theatrical performances remain central to what the movie business is about. The chapters illustrate how ticket sales are largely influenced by the production budget but also cultural differences and new movie platforms. *Essential GraphRAG*

Tomaž Bratanic, Oscar Hane, 2025-09-02 Upgrade your RAG applications with the power of knowledge graphs. Retrieval Augmented Generation (RAG) is a great way to harness the power of generative AI for information not contained in a LLM's training data and to avoid depending on LLM for factual information. However, RAG only works when you can quickly identify and supply the most relevant context to your LLM. *Essential GraphRAG* shows you how to use knowledge graphs to model your RAG data and deliver better performance, accuracy, traceability, and completeness. Inside *Essential GraphRAG* you'll learn:

- The benefits of using Knowledge Graphs in a RAG system
- How to implement a GraphRAG system from scratch
- The process of building a fully working production RAG system
- Constructing knowledge graphs using LLMs
- Evaluating performance of a RAG pipeline

Essential GraphRAG is a practical guide to empowering LLMs with RAG. You'll learn to deliver vector similarity-based approaches to find relevant information as well as work with semantic layers, deliver agentic RAG, and generate Cypher statements to retrieve data from a knowledge graph.

About the technology: A Retrieval Augmented Generation (RAG) system automatically selects and supplies domain-specific context to an LLM, radically improving its ability to generate accurate, hallucination-free responses. The GraphRAG pattern employs a knowledge graph to structure the RAG's input, taking advantage of existing relationships in the data to generate rich, relevant prompts.

About the book: *Essential GraphRAG* shows you how to build and deploy a production-quality GraphRAG system. You'll learn to extract structured knowledge from text and how to combine vector-based and graph-based retrieval methods. The book is rich in practical examples from building a vector similarity search retrieval tool and an Agentic RAG application to evaluating performance and accuracy and more.

What's inside:

- Embeddings
- vector similarity search
- and hybrid search
- Turning natural language into Cypher database queries
- Microsoft's GraphRAG pipeline
- Agentic RAG

About the reader: For readers with intermediate Python skills and some experience with a graph database like Neo4j.

About the author: The author of Manning's *Graph Algorithms for Data Science* and a contributor to *LangChain* and *LlamaIndex*. Tomaž Bratanic has extensive experience with graphs, machine learning, and generative AI. Oskar Hane leads the Generative AI engineering team at Neo4j.

Table of Contents:
