Edwin Young, 1976 , **USITC Publication**, 1982 Stainless Steel Angle from Japan United States International Trade Commission, 1995 **The Dictionary of Modern Economics** D. W. Marschak, R. Selten, 2012-12-06 Motivation That elegant

fiction the competitive equilibrium seems still to dominate the frontiers of theoretical microeconomics We may think of it in a general way as a state of affairs wherein economic agents responding rationally to announced prices make choices which are consistent and feasible The prices may also be described as taken for one reason or another the agents who respond to them consider them as given The existence of such a state its optimality its robustness against free bargaining among agents when there are many of them its uniqueness its stability when price displacements evoke specified adjustments all these issues have been studied and continue to be studied in a variety of settings Slowly the equilibrium investigated begins to incorporate public goods externalities of certain kinds differences in agents information and infinitely many time periods The appeal of such results need not be belabored the equilibrium studied may sustain an optimal resource allocation and when it does it sustains it in a manner that appears to be informationally efficient and to accord well with individual incentives Therefore it is important to extend the circumstances under which an equilibrium exists under which it sustains optimality and under which it survives displacements as well as free bargaining among agents

Database Reengineering and Interoperability T.Y. Cheung,J. Fong,B. Siu,2012-12-06 Modern computing management systems and application programs are often designed as open systems In an open environment the users application programs serving similar purposes though possibly implemented using different hardware or software technologies can interact easily and properly with one other But it is a big challenge in research and development to provide the means for integrating these technologies and reengineering the new or existing management systems so as to make all of the relevant components interoperable In case of databases because of the variety in data models and theory the interoperability and reengineering issues become even more complex and crucial especially for companies heavily involved in data management With the rapid advances in networking and database modeling technology old issues may have to be reinvestigated and new issues come up constantly It is our hope that this year's workshop the sixth in a series of annual events can provide a timely forum for database researchers and practitioners to share their recent experience and results in various aspects of this fast developing field This series of workshops has been organized by the Hong Kong Computer Society and financially supported by many local industrial and business companies This year the Cooperative Research Centre for Open Systems Technology located in the Department of Computer Science City University of Hong Kong has joined the organization team and the list of financial sponsors
