Carpenter, Timothy D. Comar, 2013 There is a gap between the extensive mathematics background that is beneficial to biologists and the minimal mathematics background biology students acquire in their courses The result is an undergraduate education in biology with very little quantitative content New mathematics courses must be devised with the needs of biology students in mind In this volume authors from a variety of institutions address some of the problems involved in reforming mathematics curricula for biology students The problems are sorted into three themes Models Processes and Directions It is difficult for mathematicians to generate curriculum ideas for the training of biologists so a number of the curriculum models that have been introduced at various institutions comprise the Models section Processes deals with taking that great course and making sure it is institutionalized in both the biology department as a requirement and in the mathematics department as a course that will live on even if the creator of the course is no longer on the faculty Directions looks to the future with each paper laying out a

case for pedagogical developments that the authors would like to see Visual Analytics and Interactive Technologies: Data, Text and Web Mining Applications Zhang, Qingyu, Segall, Richard S., Cao, Mei, 2010-10-31 This book is a comprehensive reference on concepts algorithms theories applications software and visualization of data mining text mining Web mining and computing supercomputing covering state of the art of the theory and applications of mining Branching Processes in Biology Marek Kimmel, David E.
