Online Hodges Frontotemporal Dementia Bradford Dickerson:

Hodges' Frontotemporal Dementia Bradford C. Dickerson, 2016-05-19 Frontotemporal dementia FTD is a cruel disease robbing patients of core human characteristics and wreaking havoc with relationships Clinical and scientific interest in FTD and related disorders continues to grow rapidly with major advances having occurred since this book's last publication New clinical diagnostic criteria were published in 2011 new pathological discoveries have led to new diagnostic criteria and major genetic discoveries have been made This new edition covers these developments providing the leading resource on FTD PPA PSP CBD FTD ALS and related disorders now written by a more internationally representative group of authors than before Providing an in depth and expert synthesis of the status of our knowledge of FTD and related syndromes the content includes chapters reviewing clinical neuropsychiatric neuropsychological imaging and other features of FTD and multidisciplinary approaches to patient management Essential reading for specialist and generalist neurologists psychiatrists geriatricians neuropsychologists neuropathologists and basic scientists in relevant fields Dementia Bradford Dickerson, Alireza Atri, 2014-08-01 Dementia Comprehensive Principles and Practice is a clinically oriented book designed for clinicians scientists and other health professionals involved in the diagnosis management and investigation of disease states causing dementia A who's who of internationally recognized experts contribute chapters emphasizing a multidisciplinary approach to understanding dementia The organization of the book takes an integrative approach by providing three major sections that 1 establish the neuroanatomical and cognitive framework underlying disorders of cognition 2 provide fundamental as well as cutting edge material covering specific diseases associated with dementia and 3 discuss approaches to the diagnosis and treatment of dementing illnesses Early-onset Dementia John R. Hodges, 2001 Although uncommon in comparison to dementia in the elderly early onset dementia presents a huge problem for patients their carers and physicians This is the first comprehensive and international book on the subject encompassing the clinical and neuropsychological features as well as the relevant advances in the neurosciences and patient management After an introductory chapter on epidemiology the book deals with assessment and evaluation covers disorders mimicking dementia and describes the relevant advances in imaging molecular pathology neurochemistry and neuropathology The focus then shifts to the main causes of dementia including Alzheimer's disease frontotemporal dementia dementia with Lewy bodies vascular dementia Huntington's disease prion encephalopathies and inflammatory disorders The final section of the book deals with treatment issues including drug interventions and opportunities for non pharmacological management John Hodges is an acknowledged expert in this field and has assembled a team of leading academics and clinicians from around the world as contributors Frontotemporal Dementia Syndromes John R. Hodges, 2007-11-08 This 2007 book provides a much needed review of frontotemporal dementia and related syndromes *Frontotemporal Dementias* Bernardino Ghetti, Emanuele Buratti, Bradley Boeve, Rosa Rademakers, 2021-01-12 Under the name of Frontotemporal Dementias FTD numerous hereditary and sporadic disorders are

listed FTD may take away speech and language social skills and ethical judgement wishes and will empathy and emotions it may also impair motor functions FTD may affect men and women in midlife or during old age leading to the demolition of the uniqueness of the human mind In the last decade of the 20th century and in the first two decades of the 21st century progress in the understanding of clinical neuropathological biochemical and genetic aspects of FTD has accelerated The novel awareness about FTD has directed young generations of researchers toward the study of this complex group of disorders This Volume has been formulated with the participation of some of the leading scientists who have contributed to the development of knowledge in the clinical and basic science arenas It captures the current central elements that are relevant to an up to date understanding of causes and pathogenesis of multiple forms of FTD The volume is an opus that represents a distillation of the work of many scientists and addresses the current directions in the study of one of the most complex groups of diseases In view of its structure the book could also be used as a textbook that offers both a broad and deep analysis of major areas in FTD This book planned by the International Society for Frontotemporal Dementias is distinctive as it opens a window to a wide landscape about the biology of FTD Thus the book represents a moment of reflection on the present state of our knowledge of FTD and a collective vision toward scientific progress The authors of each chapter share their knowledge and vision aimed at reducing the suffering which is caused by FTD

Neuropsychological Aspects of Frontotemporal Dementia Katya Rascovsky, 2005 Frontotemporal Dementia FTD is a clinicopathologic condition characterized by deterioration of personality and cognition associated with prominent frontal and temporal lobar atrophy The clinical manifestation of FTD is similar to that of Alzheimer s disease AD even though these two neurodegenerative disorders are histopathologically distinct Attempts to differentiate FTD from AD on the basis of clinical behavioral and neuropsychological features have met with limited success primarily because of inadequate clinical information small sample sizes and lack of autopsy confirmation of diagnosis Accordingly the present series of studies compared clinical and neuropsychological features of the two disorders in autopsy confirmed FTD and AD patients Study 1 showed that FTD n 14 and AD n 28 patients produced distinct deficit patterns with FTD patients significantly worse than AD patients on tests of verbal initiation phonemic and semantic fluency but significantly better on tests of memory and visuospatial abilities Detailed examination of verbal fluency performance in Study 2 showed that FTD patients n 16 were disproportionately impaired on phonemic compared to semantic fluency presumably because of the greater retrieval demands of the former task In contrast AD patients n 32 showed the reverse pattern of impairment apparently due to ineffective use of semantic knowledge to guide performance Study 3 used a large multi center dataset of autopsy confirmed FTD n 70 and AD n 70 patients to show that FTD is associated with shorter survival greater functional impairment and faster cognitive and functional decline compared to AD Study 4 showed that the differential cognitive profiles and rates of cognitive decline exhibited by FTD n 17 and AD n 34 patients in the first three studies were robust enough to be detected with a

relatively brief standardized mental status examination i e the Mattis Dementia Rating Scale MDRS Taken together these results indicate that at the same stage of disease FTD produces greater impairment than AD in cognitive abilities mediated by the frontal lobes e g initiation conceptualization but less impairment in abilities mediated by medial temporal lobe and posterior cortical areas e g memory semantic knowledge visuospatial abilities FTD also appears to follow a more malignant course than AD in terms of cognitive decline functional deterioration and survival The Behavioral Neurology of Dementia Bruce L. Miller, Bradley F. Boeve, 2016-11-17 Distils the most valuable discoveries in dementia research into clear insightful chapters written by international experts
