Future Trends of HPC in a Disruptive Scenario Lucio Grandinetti, Gerhard R. Joubert, Kristel Michielsens, Seyedeh Leili Mirtaheri, Michela Taufer, Rio Yokota, 2019-09-15 The realization that the use of components off the shelf COTS could reduce costs sparked the evolution of the massive parallel computing systems available today. The main problem with such systems is the development of suitable operating systems, algorithms and application software that can utilise the potential processing power of large numbers of processors. As a result, systems comprising millions of processors are still limited in the applications they can efficiently solve. Two alternative paradigms that may offer a solution to this problem are Quantum Computers (QC) and Brain Inspired Computers (BIC). This book presents papers from the 14th edition of the biennial international conference on High Performance Computing From Clouds and Big Data to Exascale and Beyond, held in Cetraro, Italy, from 2-6 July 2018. It is divided into 4 sections covering data science, quantum computing, high performance computing and applications. The papers presented during the workshop covered a wide spectrum of topics on new developments in the rapidly evolving supercomputing field, including QC and BIC, and a selection of contributions presented at the workshop are included in this volume. In addition, two papers presented at a workshop on Brain Inspired Computing in 2017 and an overview of work related to data science executed by a number of universities in the USA, parts of which were presented at the 2018 and previous workshops, are also included. The book will be of interest to all those whose work involves high performance computing.

Data Science with Semantic Technologies Archana Patel, Narayan C. Debnath, 2023-06-20 Gone are the days when data was interlinked with related data by humans and human interpretation was required. Data is no longer just data. It is now considered a Thing or Entity or Concept with meaning so that a machine not only understands the concept but also extrapolates the way humans do. *Data Science with Semantic Technologies: Deployment and Exploration*, the second volume of a two-volume handbook set, provides a roadmap for the deployment of semantic technologies in the field of data science and enables the user to create intelligence through these technologies by exploring the opportunities and eradicating the challenges in the current and future time frame. In addition, this book offers the answer to various questions like: What makes a technology semantic as opposed to other approaches to data science? What is knowledge data science? How does knowledge

data science relate to other fields This book explores the optimal use of these technologies to provide the highest benefit to the user under one comprehensive source and title As there is no dedicated book available in the market on this topic at this time this book becomes a unique resource for scholars researchers data scientists professionals and practitioners This volume can serve as an important guide toward applications of data science with semantic technologies for the upcoming generation
