misunderstanding of human life The book contrasts the example of astrology an accepted practice in ancient civilizations but now classified among the pseudosciences with astronomy a full fledged science since Galileo s time Another more recent approach regards human life as predetermined by genes the methods used by eugenicists and later by political regimes under the name of hereditarianism came to compete with genetics A broader analysis shows how astrology and eugenicism are not truly scientific approaches Next the book looks at the ways of capturing an imaginary or real human life story A comprehensive approach will try to fully understand their complexity while a more explanatory approach considers only certain specific phenomena of human life For example demography studies only births deaths and migration Another crucial factor in the collection of life histories is memory and its transmission Psychology and psychoanalysis have developed different schools to try to explain them The book concludes with a detailed discussion of the concepts and tools that have been proposed in more recent times for understanding the various aspects of life stories mechanisms systems hermeneutics and autonomy
