Colonizing Ourselves José Angel Hernández, 2024-10-15 In the late nineteenth century the Mexican government seeking to fortify its northern borders and curb migration to the United States set out to relocate Mexico Texano families or Tejanos on Mexican land In Colonizing Ourselves Jose Angel Herna ndez explores these movements back to Mexico also known as autocolonization as distinct in the history of settler colonization Unlike other settler colonial states that relied heavily on overseas settlers especially from Europe and Asia Mexico received less than 1 percent of these nineteenth century immigrants This reality coupled with the growing migration of farmers and laborers northward toward the United States led ultimately to passage of the 1883 Land and Colonization Law This legislation offered incentives to any Mexican in the United States willing to resettle in the republic Tejanos as well as other Mexican expatriates abroad were to be granted twice the amount of land for settlement that other immigrants received The campaign worked ethnic Mexicans from Texas and the Mexican interior as well as Indigenous peoples from Mexico established numerous colonies on the northern frontier Leading one of the most notable back to Mexico movements was Luis Siliceo a Texan who with a subsidized newspaper El Colono and the backing of Porfirio Di az s administration secured a contract to resettle Tejano families across several Mexican states The story of this partnership which Herna ndez traces from the 1890s through the turn of the century

The Origins of Modern Humans Fred H. Smith, James C. Ahern, 2013-07-09 This update to the award winning *The Origins of Modern Humans* A World Survey of the Fossil Evidence covers the most accepted common theories concerning the emergence of modern Homo sapiens adding fresh insight from top young scholars on the key new discoveries of the past 25 years *The Origins of Modern Humans* Biology Reconsidered allows field leaders to discuss and assess the assemblage of hominid fossil material in each region of the world during the Pleistocene epoch It features new fossil and molecular

evidence such as the evolutionary inferences drawn from assessments of modern humans and large segments of the Neandertal genome. It also addresses the impact of digital imagery and the more sophisticated morphometrics that have entered the analytical fray since 1984. Beginning with a thoughtful introduction by the authors on modern human origins, the book offers such insightful chapter contributions as Africa: The Cradle of Modern People; Crossroads of the Old World; Late Hominin Evolution in Western Asia; A River Runs through It: Modern Human Origins in East Asia; Perspectives on the Origins of Modern Australians; Modern Human Origins in Central Europe; The Makers of the Early Upper Paleolithic in Western Eurasia; Neandertal Craniofacial Growth and Development and Its Relevance for Modern Human Origins; Energetics and the Origin of Modern Humans; Understanding Human Cranial Variation in Light of Modern Human Origins; The Relevance of Archaic Genomes to Modern Human Origins; The Process of Modern Human Origins; The Evolutionary and Demographic Changes Giving Rise to Modern Humans; The Paleobiology of Modern Human Emergence. Elegant and thought provoking. The Origins of Modern Humans: Biology Reconsidered is an ideal read for students, grad students and professionals in human evolution and paleoanthropology.

The Origin of Our Species Chris Stringer, 2012. Chris Stringer's bestselling *The Origin of our Species* tackles the big questions in the ongoing debate about the beginnings of human life on earth: Do all humans originate from Africa? How did we spread across the globe? Are we separate from Neanderthals or do some of us actually have their genes? When did humans become modern? Are traits such as art, technology, language, ritual and belief unique to us? Has human evolution stopped or are we still evolving? Chris Stringer has been involved in much of the crucial research into the origins of humanity and here he draws on a wealth of evidence from fossils and archaeology to Charles Darwin's theories and the mysteries of ancient DNA to reveal the definitive story of where we came from, how we lived, how we got here and who we are. A new way of defining us and our place in history. Sunday Times. When it comes to human evolution, Chris Stringer is as close to the horse's mouth as it gets. *The Origin of Our Species* should be the one stop source on the subject. Read it now. BBC Focus. Britain's foremost expert on human evolution, you need a primer to make sense of the story so far. Here is that book. Guardian. Combines anecdote and speculation with crisp explanation of the latest science in the study of the first humans: an engaging read. New Scientist. Chris Stringer is Britain's foremost expert on human origins and works in the Department of Palaeontology at the Natural History Museum. He also currently directs the Ancient Human Occupation of Britain project aimed at reconstructing the first detailed history of how and when Britain was occupied by early humans. His previous books include *African Exodus: The Origins of Modern Humanity*, *The Complete World of Human Evolution* and most recently *Homo Britannicus*, which was shortlisted for the Royal Society Science Book of the Year in 2007.

Where are we going? *Homo sapiens* is the most successful, the most widespread and the most influential species ever to walk the Earth. Tab Rasmussen, 1993 This volume represents the proceedings of the Irving Stone Memorial Symposium on The Origin of Humans and Humanness Scientists in the fields of anthropology archaeology biology and ecology were invited to discuss their research concerning the how's where's and why's of the evolutionary history of humans Using our knowledge of the behavior and reproduction of living primates chapter 1 describes what made the earliest human like animals of 4 million years ago different from their ape relatives While showing how the science of paleontology works the origin of our genus Homo is discussed in chapter 2 With emphasis on those humans who first made regular use of stone tools some 2 million years ago chapter 3 interprets ancient human behavior and ecology from an archeological perspective Tools from genetics molecular biology archaeology and

paleontology are used to examine the origin of modern Homo sapiens in chapter 4 Chapter 5 looks at the artistry of Ice Age craftsmen Finally using computer methods chapter 6 delves into the complex issue of how does human behavior change and what is the relationship between biological and cultural evolution *Origin of the Human Species* Dennis Bonnette,2001 Using the tools of philosophy this book is an investigation of the origin of true humanity Questions of animal intelligence the philosophical meaning of the species concept Adam and Eve and human evolution being compatible with Christianity are also explored *Origins* Douglas Palmer,2010-09-20 Human Evolution Charles River Charles River Editors,2018-04-08 Includes pictures Includes online resources and a bibliography for further reading We must however acknowledge that man with all his noble qualities still bears in his bodily frame the indelible stamp of his lowly origin Charles Darwin Ever since the human mind developed the capacity for thought people have pondered not just the meaning of life but the genesis of the world the universe and all the natural marvels and precious forms of life within it To this day all of these intricate subjects continue to be matters of great contention and they are often best encapsulated in the debate between creationism and evolution On the one hand are those who are adamant that it was God or some other supreme being that designed and crafted every detail of the universe as evidenced by the plethora of creation myths from various creeds and traditions Among one of the most well known etiological tales is the classic story of the Christian God who constructed the world in 6 days and man and woman out of clay and man s rib respectively This is a concept that many still cling to today approximately 38% of Americans believed in creationism in 2017 as reported by a Gallup Poll Then there are the more obscure narratives such as the Japanese creation myth which recounts how the god and goddess Izanagi and Izanami birthed from elements mixed together with one germ of life shaped the Japanese islands with some mud and the aid of a sacred staff The Mayans preached about Tepeu the maker of all things and Gucumatz the feathered spirit who produced the world with nothing but their thoughts and placed on Earth the first quartet of humans fashioned out of white and yellow corn On the other hand are those who believe or as they would say accept evolution and scientific processes as facts As enthralling as such creation myths may be insist critics of creationism who campaign for their retirement there is not a sound shred of logic behind these time worn tales Renowned theoretical physicist Stephen Hawking arguably one of the most brilliant people to have ever lived stated Before we understand science it is natural to believe that God created the universe But now science offers a more convincing explanation His sentiments are echoed by famous atheist and evolutionary biologist Richard Dawkins in *The Selfish Gene* Today the theory of evolution is about as much open to doubt as the theory that the earth goes round the sun Some claim that evolution is just a theory as if it were merely an opinion esteemed astrophysicist Neil deGrasse Tyson another leading proponent of evolution adds The theory of evolution like the theory of gravity is a scientific fact Evolution really happened Accepting our kinship with all life on Earth is not only solid science In my view it s also a soaring spiritual experience Most scientists believe the evolution of humans has a history as long as life itself Anatomically modern humans and all other life

that has existed on the planet first came about from the single celled microorganisms that emerged approximately 4 billion years ago Through the processes of mutation and natural selection all forms of life developed and this continuous lineage of life makes it difficult to say precisely when one species completely separates from another In other words scientists still debate when a human became a human rather than the ancestor species that came before In order to understand the history of human evolution an understanding of the mechanisms that essentially created modern humans needs to be understood These processes are natural selection and evolution Human Evolution The History of the Evolution and Natural Selection Processes that Gave Rise to Modern Humans examines how humans evolved from microorganisms and the evolutionary theories that came about in the 19th century to explain it all **Modern Humans** Rebecca Stefoff,2010 This series takes readers on a journey through the evolutionary history of humans A Pocket History of Human Evolution Silvana Condemi,François Savatier,2019-11-01 Why aren t we more like other apes How did we win the evolutionary race Find out how wise Homo sapiens really are Prehistory has never been more exciting New discoveries are overturning long held theories left and right Stone tools in Australia date back 65 000 years a time when we once thought the first Sapiens had barely left Africa DNA sequencing has unearthed a new hominid group the Denisovans and confirmed that crossbreeding with them and Neanderthals made Homo sapiens who we are today A Pocket History of Human Evolution brings us up to date on the exploits of all our ancient relatives Paleoanthropologist Silvana Condemi and science journalist Fran ois Savatier consider what accelerated our evolution Was it tools our large brains language empathy or something else entirely And why are we the sole survivors among many early bipedal humans Their conclusions reveal the various ways ancient humans live on today from gossip as modern grooming to our gendered division of labor and what the future might hold for our strange and unique species **From Big Bang to Big Mystery** Brendan M.
